## How to Order When Combining Made-to-Order Specifications

How to order when combining two specifications: simple specials (XA□) and made-to-order common specifications (XB□, XC□).

■ How to Order Example: 1 (Enter the symbol in alphabetical order.)

CQ2B25 - 30D - **XA7B6**

Note) "X" of XB6 is not necessary.

● Made to Order

Symbol	Specifications
<b>XA7</b>	Change of rod end shape
<b>XB6</b>	Heat resistant cylinder

■ How to Order Example: 2 (Enter the symbol in numerical order when alphabetical letters are the same.)

CDQ2B25 - 30DZ - M9BW - **XC4C6**

Note) "X" of XC6 is not necessary.

● Made to Order

Symbol	Specifications
<b>XC4</b>	With heavy duty scraper
<b>XC6</b>	Made of stainless steel

\* Please contact SMC for the availability of a desired combination of simple specials and made-to-order specifications or a combination of three or more made-to-order specifications.

## 1 Change of Rod End Shape

-XA0 to XA30

### ⚠ Precautions

- SMC will make appropriate arrangements if no dimension, tolerance, or finish instructions are given in the diagram.
- Standard dimensions marked with "\*" will be as follows to the rod diameter (D).  
Enter any special dimension you desire.  
 $D \leq 6 \rightarrow D - 1 \text{ mm}$ ,  $6 < D \leq 25 \rightarrow D - 2 \text{ mm}$ ,  $D > 25 \rightarrow D - 4 \text{ mm}$
- In the case of double rod type and single acting retraction type, enter the dimensions when the rod is retracted.
- The same shape as the standard type is "A0".  
(The specifications of A0 are that only dimensions A and H are changed from the standard type. Excludes MWB-UT.)
- For the MWB-UT, there is no need to specify an H dimension.
- For the MWB-UT, to change 1 side, specify on 1 Simple Specials specification sheet, and to change both sides, specify on 2 Simple Specials specification sheets.

Please contact your local sales representative for more details.

Symbol

## 6 RSQ (ø12 to ø50)/RSG (ø40, ø50): Change of Rod End Shape

## -XA1 to XA38

### Applicable Series

Series		Action	Symbol for change of rod end shape
RSQ	Stopper cylinder Fixed mounting height	RSQ-Z	Double acting
		RSQ <sup>(Note)</sup>	Double acting with spring loaded
	Stopper cylinder Adjustable mounting height	RSG	Double acting
		RSG	Double acting with spring loaded
		Single acting	

(Note) Size ø12 is the same shape as the existing model (RSQ).

- For chamfered type (XA35 to XA38), make the H dimension to be equal to or less than the values on Table (1). (For the case with larger dimension than Table (1), it will be made-to-order separately.)

Table (1)

Bore size (mm)	H (mm)
ø12, ø16	40
ø20, ø32	63
ø40, ø50	83

### ⚠ Precautions

- SMC will make appropriate arrangements if no dimension, tolerance, or finish instructions are given in the diagram.
- Standard dimensions marked with "\*" will be D - 2 mm to the rod diameter (D).  
Enter any special dimension you desire.
- The following diagram shows piston rod at spring extend.

For the lengthwise dimension, enter the amount that you wish to add to the standard dimension.

(If the length is the same for the standard type, \* in the figure on the left becomes 0.)

MGQ	Standard type	MGQM	Slide bearing	XA1, 6, 17, 21
		MGQL	Ball bushing bearing	XA1, 6
MVGQ	With valve	MVGQM	Slide bearing	XA1, 6, 17, 21
		MVGQL	Ball bushing bearing	XA1, 6

\* For MGP, this is only applicable for the standard products (Basic type, With air cushion).

### ⚠ Precautions

- Ensure that the cylinder's overall length should not exceed the allowable overall length. In the case of exceeding the allowable overall length, it will be available as specials.
- In fig. (1) and (2) shown below, E' dimension cannot be set to less than E dimension of the standard product. Confirm by referring to the catalog.
- SMC will make appropriate arrangements if no dimension, tolerance, or finish instructions are given in the diagram.
- When the chamfering of the guide rod end is 30°, the \* dimension is the guide rod diameter (D) - 2 mm. When the chamfering of the guide rod end is C0.5, the \* dimension is the guide rod diameter (D) - 1 mm.

CVS1	Valve mounted cylinder	CVS1	Double acting, Single rod	
		CVS1K	Double acting, Single rod	Applicable to ø40 to ø63

### ⚠ Precautions

- Specify "Z + 1/2 stroke" in the case the trunnion bracket position is not -XC14A, B or trunnion is not a center trunnion.
- SMC will make appropriate arrangements if no dimension, tolerance, or finish instructions are given in the diagram.
- The possible range of trunnion bracket mounting position is indicated in the table below.
- Some trunnion mounting positions do not allow auto switch mounting. Please consult with SMC for more information.
- When the trunnion position is changed to somewhere close to the cover for the end lock cylinder, there is a possibility that the lock part and the trunnion pivot bracket may interfere with each other. Change the lock position (-X3) at the same time.
- The CS2 series has a greater range of trunnion bracket mounting positions than CS1 series, so the value of "Z + 1/2 stroke" at -XC14A and -XC14B is different.

The following changes are dealt with through the Simple Specials System.  
Please contact your local sales representative for more details.

### 10 Tapped Hole, Drilled Hole, Pinned Hole Machined Additionally

Symbol

**-XC79**

This simple special is meant for machining additionally tapped hole, drilled hole, and pinned hole, as requested from customer, on parts designed largely for mounting a workpiece, etc. in the combined air cylinders.

But, for each model, since they have the portions which are impossible to machine additionally, refer to the additional machining limitation.

#### ⚠ Precautions

- We cannot take any responsibility as for the intensity of holes machined additionally and the effects of decreased intensity for the product itself.
- It will not be plated again for the machined part additionally.
- Be sure to fill in "through" for through-hole, and "effective depth" for blind hole.
- When using by machining through-hole additionally, ensure that the tip of the bolt, etc. for mounting workpiece should not stick into the cylinder side. It may result in an unexpected problem.
- Use caution not to interfere the current mounting hole on the standard products with the hole to be machined additionally. But it is possible to drill additionally the larger size of hole at the same position as the current hole.

#### Common Complementary Explanation/Holes which can be additionally machined are the following 3 types.

Tapped hole	Drilled hole	Pinned hole												
<p>Designated nominal diameter and tapped hole of a pitch are machined additionally. (Maximum nominal thread diameter M20)</p> <p>Blind hole is deep into the bottom of prepared hole which sums up A to C in the figure below in contrast to the effective depth of tapped hole. When there is a condition which does not allow through-hole, etc., leave sufficient thickness in the inner part of hole.</p> <p style="text-align: center;">D (Thread size)</p> <p style="text-align: center;">A (Effective thread depth)</p> <p style="text-align: center;">B = 3 x P (Incomplete thread section)</p> <p style="text-align: center;">C = 0.3 x (D - P)</p> <p>Note) P stands for thread pitch.</p>	<p>Drilled hole of a designated internal diameter is machined. (Maximum hole diameter 20 mm)</p> <p>If you wish for blind hole, instruct us with effective depth. (Refer to the figure below.) Besides, dimensional accuracy for internal diameter will be <math>\pm 0.2</math> mm.</p> <p style="text-align: center;">D</p> <p style="text-align: center;">A (Effective depth)</p> <p style="text-align: center;">C = 0.3D</p>	<p>Pinned hole of a designated diameter (reamer hole) is machined.
