## Example) XLAV-100-M9NA-1G-XAN1A

Note 1) Option specifications/Combinations

This model has indicator, auto switch and K(DN) flange options, but high temperature/heater options are not available.

Note 2) Solenoid valves

XLAV-100, 160: SYJ519

Example) SYJ319-1GS, etc.

- \* For details, consult your SMC sales representative.
- \* For option "Q", the solenoid valve should be a CE/UKCA-compliant product.

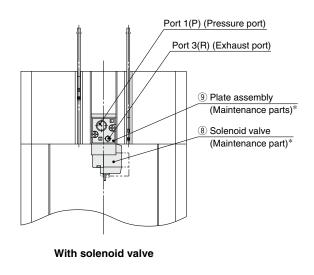

# XLA/XLAV Series

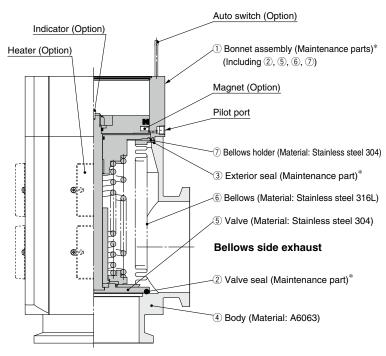

# **Specifications**

Model		XLA(V)-100 XLA(V)-160	
Valve type		Normally closed (Pressurize to open, Spring seal)	
Fluid		Inert gas under vacuum	
Operating	XLA	5 to 60 (High temperature type: 5 to 150)	
temperature (°C)	XLAV	5 to	50
Operating pressure (	Pa) (abs)	1 x 10 <sup>-6</sup> to atmos	spheric pressure
Conductance (L/s) No	te 1)	300 800	
Leakage (Pa·m³/s)	Internal	In case of standard material FKM: 1.3 x 10 <sup>-10</sup> at	normal temperature, excluding gas permeation
(He)	External	In case of standard material FKM: 1.3 x 10 <sup>-11</sup> at normal temperature, excluding gas permeation	
Flange type		KF (NW), K (DN)	
Principal materials		Body: Aluminum alloy, Bellows: Stainless steel 316L, N	lain part: Stainless steel, FKM (Standard seal material)
Surface treatment		External: Hard anodized Internal: Raw material	
Pilot pressure (MPa)	(G)	0.4 to	0.7
Dilet next size	XLA	Rc1/8	Rc1/4
Pilot port size	XLAV	Rc1/8: Port 1(P), M5: Port 3(R)	
Woight (kg)	XLA	10.6	18.5
Weight (kg)	XLAV	10.7	18.6

Note 1) Conductance is the value for an elbow with the same dimensions.

# Construction/Operation

Valve side exhaust \* Refer to the back of page 84 for "Maintenance Parts".

# <Working principle>

By applying the pilot pressure from the pilot port, the piston-coupled valve overcomes the spring force or operating force by pressure, and the valve opens.

For the XLAV, the pilot pressure is always applied to the port 1(P), and the valve opens when the solenoid valve is turned ON and closes when it is turned OFF.

# <Options>

Auto switch: The magnet activates the auto switch. With 2 auto switches, the open and closed

positions are detected, and with 1 auto switch, either the open or closed position is detected. Auto switches are applicable at ordinary temperatures only (5 to 60°C).

Heater: Simple heating is performed using thermistors. The valve body can be heated to approximately 100 or 120°C, depending on the heater option and the valve size. The type and number of thermistors to be used will vary depending upon size and setting temperature. In the case of high temperature specifications, the bonnet assembly is a heat resistant structure. This does not apply in cases where a solenoid valve is

attached.

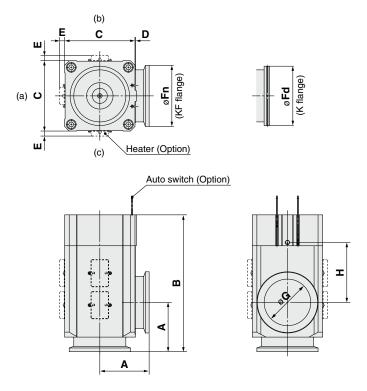

Indicator: When the valve is open, an orange marker appears in the center of the name plate.

Note 2) For valve heater specifications, refer to "Common Option [1] Heater" on page 80.

# **Dimensions**

# XLA/Air operated

									(mm)
Model	Α	В	С	D	E Note 1)	Fn	Fd	G	Н

## Example) XLFV-100-M9NA-1G-XAN1A

Note 1) Option specifications/Combinations

This model has indicator, auto switch and K(DN) flange options, but high temperature/heater options are not available.

Note 2) Solenoid valves

XLFV-100, 160: SYJ519

Example) SYJ519-1GS.

- \* For details, consult your SMC sales representative.
- \* For option "Q", the solenoid valve should be a CE/UKCA-compliant product.

# XLF/XLFV Series

# **Specifications**

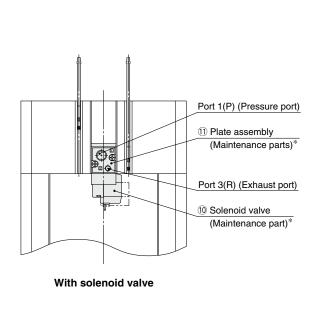

Model		XLF(V)-100	XLF(V)-160			
Valve type		Normally closed (Pressurize to open, Spring seal)				
Fluid		Inert gas un	der vacuum			
Operating	XLF	5 to 60 (High temper	rature type: 5 to 150)			
temperature (°C)	XLFV	5 to 50				
Operating pressure (	Pa) (abs)	1 x 10 <sup>-5</sup> to atmos	spheric pressure			
Conductance (L/s) No	te 1)	300	800			
Leakage (Pa·m³/s)	Internal	In case of standard material FKM: 1.3 x 10 <sup>-10</sup> at normal temperature, excluding gas permeation				
(He)	External	In case of standard material FKM: 1.3 x 10 <sup>-10</sup> at normal temperature, excluding gas permeation				
Flange type		KF (NW), K (DN)				
Principal materials No	ote 3)	Body: Aluminum alloy, Main part: Stainless steel, FKM (Standard seal material)				
Surface treatment		External: Hard anodized Internal: Raw material				
Pilot pressure (MPa)	(G)	0.4 to 0.7				
Dilat mant aims	XLF	Rc1/8	Rc1/4			
Pilot port size	XLFV	Rc1/8: Port 1(P), M5: Port 3(R)				
Wainht (km)	XLF	10	18			
Weight (kg)	XLFV	10.1	18.1			

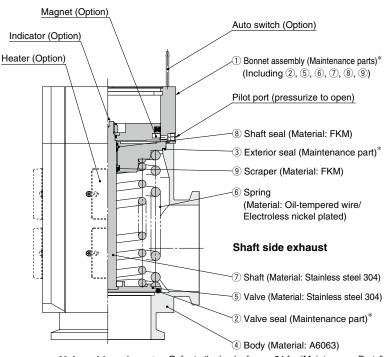

Note 1) Conductance is the value for an elbow with the same dimensions.

Note 2) For valve heater specifications, refer to "Common Option [1] Heater" on page 80.

Note 3) A coating of vacuum grease [Y-VAC2] is applied to the seal-material sliding portion of the vacuum part.

# Construction/Operation

Valve side exhaust \* Refer to the back of page 84 for "Maintenance Parts".

## <Working principle>

By applying the pilot pressure from the pilot port, the piston-coupled valve overcomes the spring force or operating force by pressure, and the valve opens.

For the XLFV, the pilot pressure is always applied to the port 1(P), and the valve opens when the solenoid valve is turned ON and closes when it is turned OFF.

## <Options>

Auto switch: The magnet activates the auto switch. With 2 auto switches, the open and closed positions are detected, and with 1 auto switch, either the open or closed position is detected. Auto switches are applicable at ordinary temperatures only (5 to 60°C).

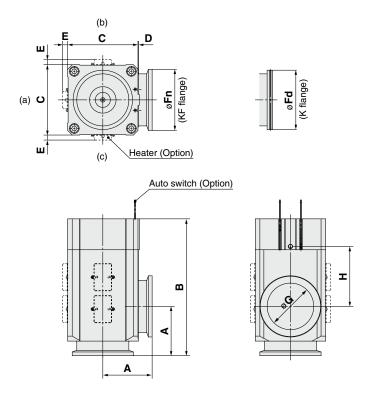

Heater: Simple heating is performed using thermistors. The valve body can be heated to approximately 100 or 120°C, depending on the heater option and the valve size. The type and number of thermistors to be used will vary depending upon size and setting temperature. In the case of high temperature specifications, the bonnet assembly is a heat resistant structure. This does not apply in cases where a solenoid valve is attached.

Indicator: When the valve is open, an orange marker appears in the center of the name plate.

# **Dimensions**

# XLF/Air operated

									(mm)
Model	Α	В	С	D	ENote 1)	Fn	Fd	G	Н
XLF-100	108	299	154	3	11	134	130	102	131
XLF-160	138	315	200	3	11	190	180	153	112

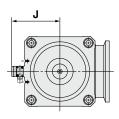

Note 1) Dimension E applies when heater option is included. (Lead wire length: approx. 1 m)
Note 2) (a), (b) and (c) in the above drawing indicate heater mounting positions.

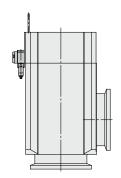

Moreover, heater mounting positions will differ depending on the type of heater.

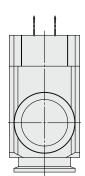

For details, refer to Common Option [2] Mounting position of the heater on page 80.

# **Specifications**

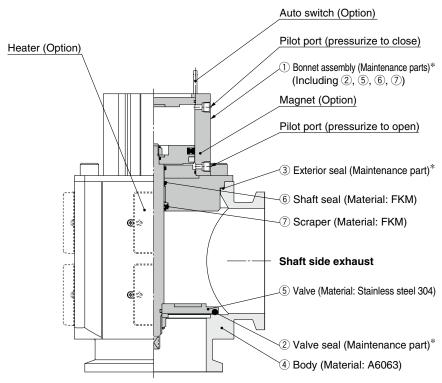

Model		XLG-100	XLG-160	
Valve type		Double acting (Dual operation), Pressurize to open/close		
Fluid		Inert gas un	der vacuum	
Operating temperature (°C)	XLG	5 to 60 (High temper	rature type: 5 to 150)	
Operating pressure (Pa) (abs)		Atmospheric pre	essure to 1 x 10 <sup>-5</sup>	
Conductance (L/s) Note 1)		300	800	
Leakage (Pa·m³/s) Internal		In case of standard material FKM: 1.3 x 10 <sup>-10</sup> at normal temperature, excluding gas permeation		
(He)	External	In case of standard material FKM: 1.3 x 10 <sup>-10</sup> at	normal temperature, excluding gas permeation	
Flange type		KF (NW), K (DN)		
Principal materials		Body: Aluminum alloy, Main part: Stainl	ess steel, FKM (Standard seal material)	
Surface treatment		External: Hard anodized	Internal: Raw material	
Pilot pressure (MPa) (G)		0.4 to 0.6		
Pilot port size	XLG	Rc1/8		
Weight (kg)	XLG	7.6	14.9	

Note 1) Conductance is the value for an elbow with the same dimensions.

Note 2) For valve heater specifications, refer to "Common Option [1] Heater" on page 80.

Note 3) A coating of vacuum grease [Y-VAC2] is applied to the seal-material sliding portion of the vacuum part.

# Construction/Operation

Valve side exhaust \* Refer to the back of page 84 for "Maintenance Parts".

### <Options>

Auto switch: The magnet activates the auto switch. With 2 auto switches, the open and closed positions are detected, and with 1 auto switch, either the open or closed position is detected. Auto switches are applicable at ordinary temperatures only (5 to 60°C).

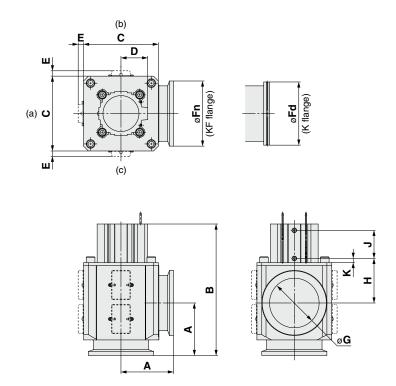

: Simple heating is performed using thermistors. The valve body can be heated to approximately 100 or 120°C, depending on the Heater heater option and the valve size. The type and number of thermistors to be used will vary depending upon size and setting temperature. In the case of high temperature specifications, the bonnet assembly is a heat resistant structure. This does not apply in cases where a solenoid valve is attached.

Conductores (L/s) Note 1)	Maiı	n exhaust valve	14	45	80	160	200	300	800
Conductance (L/s) Note 1)	Initi	al exhaust valve	0.5 to 3	2 to 8	2.5 to 11	4 to 18	4 to 18	6.5 to 31.5	6.5 to 31.5
Leekene (De m³/e) (He)		Internal	In case of standard material FKM: 1.3 x 10 <sup>-10</sup> at normal temperature, excluding gas permeation						
Leakage (Pa·m³/s) (He)		External	In case of st	In case of standard material FKM: 1.3 x 10 <sup>-11</sup> at normal temperature, excluding gas permeation					s permeation
Flange type			KF (NW) KF (NW), K (DN)						
Principal materials Note 3)			Body: Aluminum alloy, Bellows: Stainless steel 316L, Main part: Stainless steel, FKM (Standard seal material)					d seal material)	
Surface treatment			External: Hard anodized Internal: Raw material						
Pilot pressure (MPa) (G)			0.4 to 0.7 [Both main & initial exhaust valves]						
XLD		M5	M5 Rc1/8 Rc1/4				Rc1/4		
Pilot port size	XLDV		M5: Port 1(P), Port 3(R)						
Mainh (lan)		XLD	0.5	1.2	1.8	3.4	5.6	11.5	20
Weight (kg)		XLDV	0.57	1.3	1.9	3.5	5.7	11.6	20.1

Note 1) The main exhaust valve conductance is the valve for the "molecular flow" of an elbow with the same dimensions. The initial exhaust valve conductance is the value for the "viscous flow".

Note 2) For valve heater specifications, refer to "Common Option [1] Heater" on page 80.

Note 3) A coating of vacuum grease [Y-VAC2] is applied to the seal-material sliding portion (initial exhaust valves sliding parts) of the vacuum part.

# Construction/Operation

When the pilot pressure is applied to the pilot port S, the valve S is removed from the valve S seal assembly, and the valve opens the adjusted amount. For the XLDV, when the pilot pressure is always applied to the port 1(P) and the initial exhaust solenoid valve is turned ON, the valve opens the adjusted amount.

### 3 Opening of the main exhaust valve (valve M)

When the pilot pressure is applied to the pilot port M, the valve M is removed from the body seat portion, and the valve fully opens. For the XLDV, when the pilot pressure is applied to the port 1(P) and the initial exhaust solenoid valve is turned ON, the valve fully opens.

# 4 Closing of the initial exhaust / main exhaust valves By removing the pilot pressure from the pilot port S and pilot port M,

both S and M valves return to their previous positions and they are sealed. For the XLDV, by turning OFF the initial exhaust valve and main exhaust valve, both S and M valves return to their previous positions and they are sealed.

### <Options>

Auto switch: The magnet actuates the auto switch. With two auto (for main switches, the open and closed positions are detected, exhaust and with one auto switch, either the open or closed position is detected. Auto switches are applicable at ordinary temperatures only (5 to 60°C).

Heater: Simple heating is performed using thermistors. The valve body can be heated to approximately 100 or 120°C, depending on the heater option and valve size. The type and number of thermistors to be used will vary depending upon size and setting temperature. In the case of high temperature specifications, the bonnet assembly is a heat resistant structure. This is not available with solenoid valve.

Note) The adjustment nut does not rotate during valve operation. However, rotation of the adjustment nut can be fixed to prevent incorrect operation. When fixing the adjustment nut after setting, tighten it with the tightening torque shown in the table below. (Tightening with excessive torque can result in damaged components or the generation of abnormal noise.)

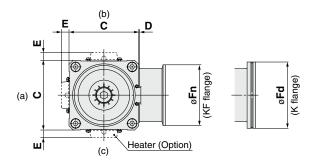

### "A" Section Thread Tightening Torque

<sup>\*\*</sup> Same specifications as the standard FKM type

# Construction/Operation

# <Working principle>

By turning the handle to the left, the valve opens. The handle does not move up and down, but the indicator shows the open or closed position of the valve. As the handle is turned to the right, the valve closes, and when the turning force of the handle suddenly ceases to be felt, the valve is sealed. The sealing force for the valve comes from the spring, and is constant.

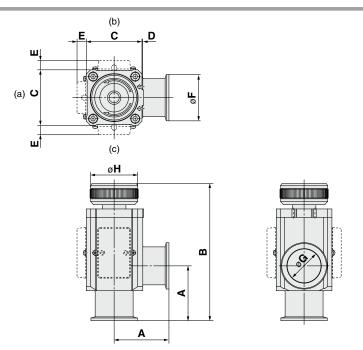

## <Options>

Heater: Simple heating is performed using thermistors. The valve body can be heated to approximately 100 or 120°C, depending on the valve size.

The type and number of thermistors to be used will vary depending upon size and setting temperature.

Indicator: When the valve is open, an orange marker appears in the center of the name plate.

# Construction/Operation

### <Working principle>

# XLS-□-□□ (Without control power supply)

Exterior seal

By energizing the coil assembly for 0.15 to 0.2 s with the starting voltage, the valve (9) opens. After that, it is held with 25% of the starting voltage. Please do not energize with the starting voltage for 0.3 s or more, as burnout may result. When energizing of the coil assembly is canceled, the valve 9 closes.

# XLS-□-P□G (With control power supply)

By applying the rated voltage to the coil assembly, the valve 9 opens. When energizing of the coil assembly is canceled, the valve 9 closes.

· Because the pressure is in balance, the direction of exhaust may be decided freely.

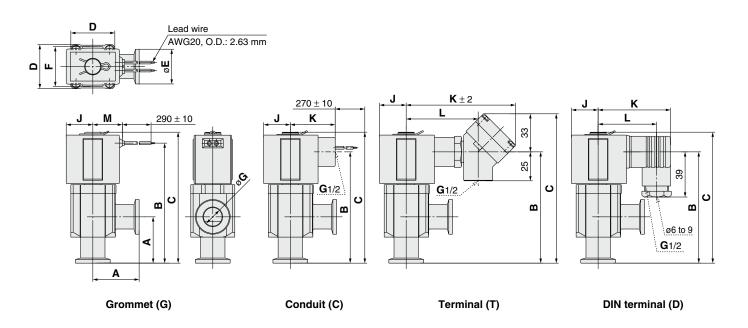

Note 2) A coating of vacuum grease [Y-VAC3] is applied to the valve seat of the vacuum part.

<sup>\*</sup> The inrush current of the heater flows for several ten seconds when using 100V while it flows for several seconds when using 200V. However, this inrush current decreases momentarily.

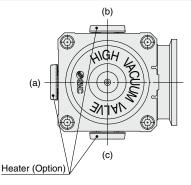

\* Refer to "Maintenance Parts" on page 84 for further details regarding quantity and type.

# Inrush current flow time (Reference)

# 2 Mounting position of the heater

Heater symbol	XL□-25	XL□-40	XL□-50	XL□-63	XL□-80	XL□-100	XL□-160
<b>H4</b> (100°C)	_	(a)	(a)	(b), (c)	(a), (b), (c)	(b), (c)	(a), (b), (c)
<b>H5</b> (120°C)	(a)	(b), (c)	(b), (c)	(a), (b), (c)	(b), (c)	(a), (b), (c)	(b), (c)

<sup>\*</sup> When the valve uses multiple heater assemblies, do not turn ON the power to each heater assembly at the same time. Turn ON the power to each heater assembly one-by-one in order at intervals of 30 sec. since the inrush current is large.

<sup>\*</sup> The heater temperature will decrease several % from the start of heating and then becomes stable. (The heater temperature may decrease approximately 5 to 10% due to individual differences.)

<sup>\*</sup> As the stable temperature of the heated product may vary by approx. ±10 to 15% due to instrumental error, be aware that the temperature specifications are to be used as a guide only (H4: 100°C and H5: 120°C).

Be sure to read this before handling the products.

# Air Operated Angle Valves/XLA(V), XLC(V), XLD(V), XLF(V), XLG(V) Series

# Design

# **⚠** Warning

# All models

- 1. The body material is A6063, the bellows are stainless steel 316L, and other metal seal material is stainless steel 304. Standard seal material in the vacuum section is FKM that can be changed to the other materials (please refer to "How to Order"). Use fluids which are compatible with materials after confirming.
- **2.** Select materials for the actuation pressure piping, and heat resistance for fittings that are suitable for the applicable operating temperatures.
- Model with auto switch/XLA(V), XLC(V), XLD(V), XLF(V), XLG(V)
- The switch section should be kept at a temperature no greater than 60°C.
- Model with heater/XLA, XLC, XLD, XLF, XLG
- 1. When using a model with a heater (thermistor), a device should be installed to prevent overheating.
- Model with solenoid valve/XLAV, XLCV, XLDV, XLFV, XLGV
- For models with a solenoid valve, the temperature of the solenoid valve section should be no greater than 50°C.

### Selection

# **⚠** Caution

### All models

- For high vacuum valves used in the main exhaust lines of flat panel display manufacturing equipment and other large manufacturing equipment, the XLF(V) or XLG(V) series, employing O-ring seal type for improved durability, is recommended.
- When controlling valve responsiveness, take note of the size and length of piping, as well as the flow rate characteristics of the actuating solenoid valve.
- Actuating pressure should be kept within the specified range. 0.4 to 0.5 MPa is recommended.
- 4. Use within the limits of the operating pressure range.
- 5. The actuating piston chamber and the bellows chamber [except for XLF(V)/XLG(V)] are directly connected to atmosphere. Please use in an environment in which dust emissions will not cause problems. (Please consult SMC if the release of dust must be avoided.)
- High temperature type/XLA, XLC, XLD, XLF, XLG
- In the case of gases which cause a large amount of deposits, heat the valve body to prevent deposits in the valve.

# Mounting

# **⚠** Caution

### All models

- In high humidity environments, keep valves packaged until the time of installation.
- In case with switches and solenoid valves, secure the lead wires so that they have sufficient slack, without any unreasonable force applied to them.
- 3. Perform piping so that excessive force is not applied to the flange sections. In case there is vibration of heavy objects or attachments, etc., secure them so that torque is not applied directly to the flanges.

# Mounting

# **⚠** Caution

- 4. Vibration resistance allows for normal operation up to 30 m/s² (45 to 250 Hz), but continuous vibration may cause a decline in durability. Arrange piping to avoid excessive vibrations or shocks.
- High temperature type (Model/XLA, XLC, XLD, XLF, XLG; Temperature specifications/H0, H4, H5)
- 1. In models with heater (thermistor), take care not to damage the insulation components of the lead wires and connector section.
- 2. The setting temperature for models with heater should be established without a draft or heat insulation. It will change depending on conditions such as heat retaining measures and the heating of other piping. Fine adjustment is not possible.
- When installing heater accessories or mounting a heater, check insulation resistance at the actual operating temperature. A short circuit breaker or fuse should be installed.
- 4. When a valve is to be heated, only the body section should be heated, excluding the bonnet section.
- When a heater is in operation, the entire valve becomes hot. Be careful not to touch it with bare hands, as burns will result.

## **Piping**

# **⚠** Caution

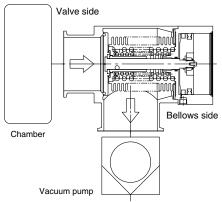

- Before mounting, clean the surface of the flange seal and the O-ring with ethanol, etc.
- 2. There is an indentation of 0.1 to 0.2 mm in order to protect the flange seal surface, and it should be handled so that the seal surface is not damaged in any way. When using an outer ring, be sure that the O-ring is compressed sufficiently. (There is basically no problem with the outer ring.)
- 3. Exhaust direction

During operation, the direction of the exhaust may be determined freely, but in cases where a flow is generated by the exhaust, a decline in durability may result.

The exhaust direction shown in the figure below (bellows side exhaust) is recommended.

Please take all available precautions, as the life of the equipment is affected by conditions of usage.

# Recommended exhaust direction [Vacuum pump connected on bellows side]

4. The valve may not be mounted depending on the piping material type (clamp, etc.). Be sure to check the piping material before use.

Be sure to read this before handling the products.

# Air Operated Angle Valves/XLA(V), XLC(V), XLD(V), XLF(V), XLG(V) Series

### Maintenance

# **⚠** Caution

- When removing deposits from a valve, take care not to damage any of its parts.
- Replace the bonnet assembly when the end of its service life is approached.
- If damage is suspected prior to the end of the service life, perform early maintenance.

# Maintenance

# **⚠** Caution

- **4.** SMC specified parts should be used for service. Refer to "Construction", "Replacement Parts," or "Maintenance Parts."
- 5. When removing valve or exterior seals, take care not to damage the sealing surfaces. When installing the valve seal, be sure that the O-ring is not twisted.

# Manual Angle Valve/XLH Series

### Design

# **⚠** Warning

- 1. The body material is A6063, the bellows are stainless steel 316L, other vacuum parts are stainless steel 304. FKM is the standard seal material for the vacuum part, but other materials may be selected (please refer to How to Order). Please check the material used, and use only fluids that will not interfere with the material.
- When using a model with a heater (thermistor), a device should be installed to prevent over heating.

### Selection

# **⚠** Caution

- 1. Use within the limits of the operating pressure range.
- In the case of gases which cause a large amount of deposits, heat the valve body or use a model with heater to prevent deposits in the valve.

## Mounting

# 

- 1. In models with heater (thermistor), take care not to damage the insulation components of the lead wires and connector section.
- 2. The setting temperature for models with heater should be established without a draft or heat insulation. It will change depending on conditions such as heat retaining measures and the heating of other piping. Fine adjustment is not possible.
- When installing heater accessories or mounting a heater, check insulation resistance at the actual operating temperature. A short circuit breaker or fuse should be installed.
- 4. When a valve is to be heated, only the body section (excluding handle part) should be heated.
- In high humidity environments, keep valves packaged until the time of installation.
- **6.** When a heater is in operation, the entire valve becomes hot. Be careful not to touch it with bare hands, as burns will result.
- 7. Perform piping so that excessive force is not applied to the flange sections. In case there is vibration of heavy objects or attachments, etc., secure them so that torque is not applied directly to the flanges.

# **Piping**

#

# **⚠** Warning

- 1. The body material is A6063, the bellows are stainless steel 316L, the other metal materials used in the vacuum part are 13Cr stainless steel, stainless steel 304, and A2017, and the seal material is FKM. In addition, a fluorinated resin (PFA) is used in the armature assembly of the vacuum part. The valve of the vacuum part has a fluorinated grease coating. Please check the material used, and in the course of maintenance, use only liquids that will not interfere with the material.
- 2. In cases without an operating power supply, the starting voltage is applied for only 0.15 to 0.2 s, and after this, a holding voltage (25% of the starting voltage) must be applied. If not performed properly, this can cause burning of the coil and fire, etc.
- 3. Be certain to install a fuse or short circuit breaker in the power supply circuit.

# Selection

# **∧** Caution

1. Use within the limits of the operating pressure range.

### Mounting

# **⚠** Caution

- In high humidity environments, keep valves packaged until the time of installation.
- 2. Please secure in such a way that the lead wire has sufficient curvature, and that no excessive force is applied to it.

# Changing the entry of DIN terminal connector

After separating the terminal block and housing, the cord entry can be changed by attaching the housing in the desired direction (4 directions at  $90^{\circ}$  intervals).

# **Piping**

# **⚠** Caution

- Before mounting, clean the surface of the flange seal and the O-ring with ethanol, etc.
- 2. There is an indentation of 0.1 to 0.2 mm in order to protect the flange seal surface, and it should be handled so that the seal surface is not damaged in any way. When using an outer ring, be sure that the O-ring is compressed sufficiently. (There is basically no problem with the outer ring.)
- The valve may not be mounted depending on the piping material type (clamp, etc.). Be sure to check the piping material before use.

### **Maintenance**

# **⚠** Caution

- Replace the core and armature assemblies when the end of their service life is approached.
- If damage is suspected prior to the end of the service life, perform early maintenance.
- **3.** SMC specified parts should be used for service parts. Refer to "Replacement Parts" on back of page 84 for further details.

Be sure to read this before handling the products.

### **Maintenance Parts**

# Air operated angle valve/Manual valve

1. When replacing seal materials, please replace bonnet assembly or handle assembly. This may not be applicable in cases where the seal material differs from that used in

Bonnet

# Bonnet Assembly, Handle Assembly Component Parts No.: (1)

Note 1) In cases where the valve seal material is other than the standard (FKM: includes Compound no. 1349-80: made by Mitsubishi Cable Industries, Inc.), please add suffix symbol for seal material (Refer to the table 1 on page 85) at the end of the part number.

Note 2) An auto switch magnet is not attached. In cases where an auto switch magnet is attached, please add "-M9//" (M9// for the XLC/XLG with a size of 50 or more) at the end of the part number. (Not available for high temperature models)

Note 3) Auto switch and solenoid valve are not attached. When a set including auto switch and solenoid valve is required, please add the symbols after the auto switch in "How to Order" at the end of the part number.
