Stainless Steel High Vacuum Angle/In-line Valve

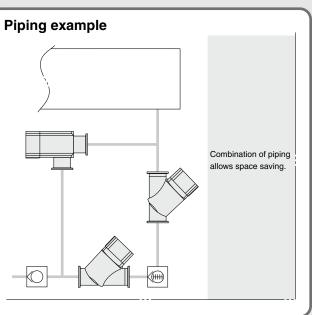

XM, XY Series

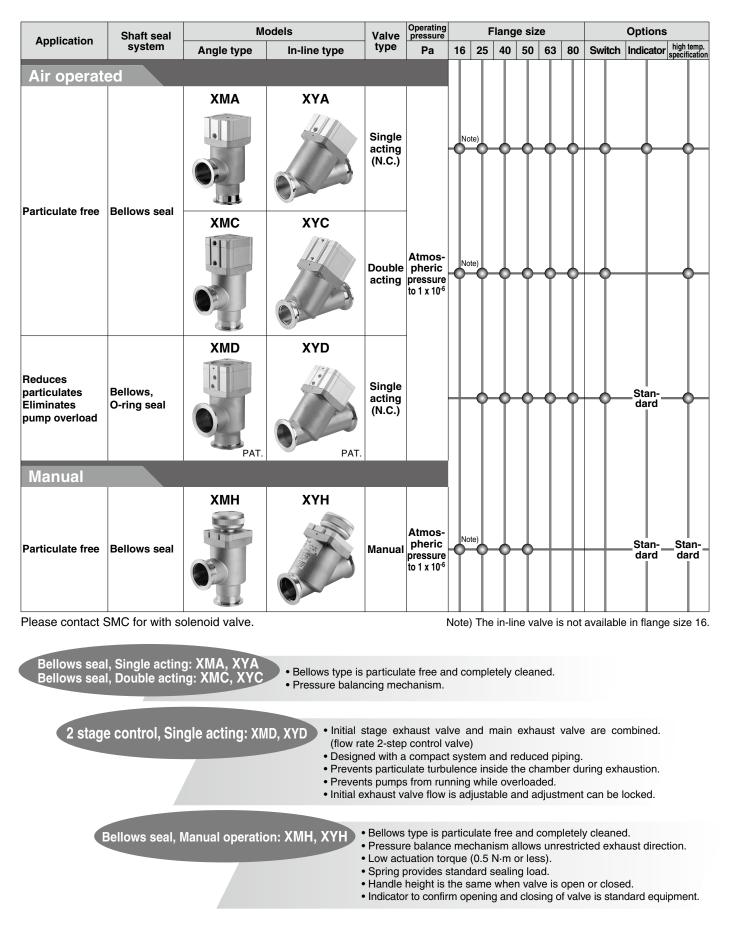

- Body material: SCS13 (conforms to Stainless steel 304)
- A precision casting, unified composition prevents accumulation of gas.
- The XM series is interchangeable with the XL series, aluminum high vacuum angle valve. Lightweight & compact

Note 1) Main exhaust valve conductance is the valve for the molecular flow of an elbow having the same dimensions. The initial exhaust valve is the value for the viscous flow.

Note 2) Figures in () indicates the weight of CF (conflate) fittings. Note 3) A coating of vacuum grease [Y-VAC2] is applied to the seal-material sliding portion (initial exhaust valves sliding parts) of the vacuum part.

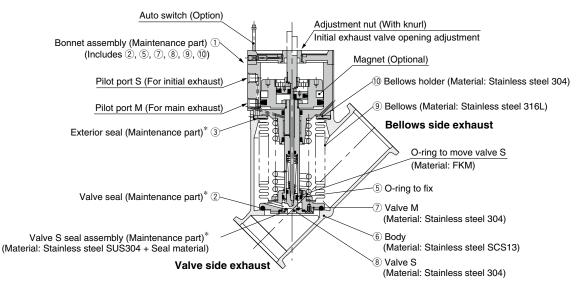

XMD, XYD Series

Construction

XMD/Angle type

XYD/In-line type

* Refer to page 115 for maintenance parts.

<Operating principle> XMD, XYD Series

1 Initial exhaust valve opening adjustment

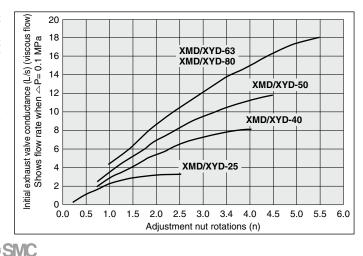

The initial exhaust rate should be adjusted without applying the pilot pressure to the pilot port S before operation. The initial exhaust rate is set to zero by gently turning the adjustment nut clockwise until it stops. (Do not use any tools.) The initial exhaust rate is adjusted by turning the adjustment nut counterclockwise. The number of adjustment nut (its pitch is 1 mm) rotations and initial exhaust conductance should be confirmed referring to the figure on the right.

2 Opening of the initial exhaust valve (valve S)

When the pilot pressure is applied to the pilot port S, the valve S is removed from the valve S seal assembly, and the valve opens the adjusted amount.

3 **Opening of the main exhaust valve (valve M)** When the pilot pressure is applied to the pilot port M, the valve M is removed from the body seat portion, and the valve fully opens.

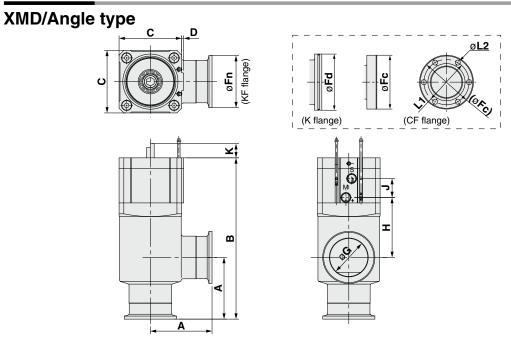

I Closing of the initial exhaust valve, the main exhaust valve By removing the pilot pressure from the pilot port S and pilot port M, both S and M valves return to their previous positions and they are sealed.

XM, XY Series Specific Product Precautions 1

Be sure to read this before handling the products.

Design

Marning

• All models

- 1. The body material is SCS13 (conforms to Stainless steel 304), the bellows is Stainless steel 316L, and other metal seal material is Stainless steel 304. Standard seal material in the vacuum section is FKM that can be changed to the other materials (please refer "How to Order"). Use fluids those are compatible with using materials after confirming.
- 2. Select materials for the actuation pressure piping, and heat resistance for fittings that are suitable for the applicable operating temperatures.
- Model with auto switch
- 1. The switch section should be kept at a temperature no greater than 60°C.

Selection

ACaution

All models

- 1. When controlling valve responsiveness, take note of the size and length of piping, as well as the flow rate characteristics of the actuating solenoid valve.
- **2.** Actuating pressure should be kept within the specified range. 0.4 to 0.5 MPa is recommended.
- 3. Use within the limits of the operating pressure range.
- The actuating piston chamber and the bellows chamber are directly connected to the atmosphere. Please use in an environment in which dust emissions will not cause problems.
- High temperature types
- 1. In the case of gases which cause a large amount of deposits, heat the valve body to prevent deposits in the valve.

Mounting

All models

- 1. In high humidity environments keep valves packaged until the time of installation.
- In case with switches, secure the lead wires so that they have sufficient slack, without any unreasonable force applied to them.
- Perform piping so that excessive force is not applied to the flange sections. In case there is vibration of heavy objects or attachments, etc., secure them so that torque is not applied directly to the flanges.
- 4. Vibration resistance allows for normal operation up to 30 m/s² (45 to 250 Hz), but continuous vibration may cause a decline in durability. Arrange piping to avoid excessive vibrations or shocks.
- High temperature types (Models/XMH, XYH; Temperature specifications/H0)
- 1. When a valve is to be heated, only the body section should be heated, excluding the bonnet (handle) section.

Piping

≜Caution

- **1.** Before mounting, clean the surface of the flange seal and the O-ring with ethanol, etc.
- 2. There is an indentation of 0.1 to 0.2 mm in order to protect the flange seal surface, and it should be handled so that the seal surface is not damaged in any way.
- 3. Exhaust direction

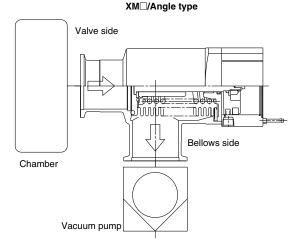

During operation, the direction of the exhaust may be determined freely, but in cases where a flow is generated by the exhaust, a decline in durability may result.

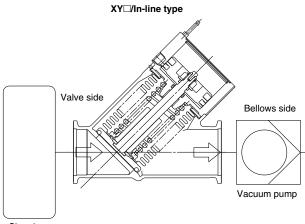

The exhaust direction shown in the figure below (bellows side exhaust) is recommended.

Please take all available precautions, as the life of the equipment is affected by conditions of usage.

Recommended exhaust direction [Vacuum pump connected on bellows side]

acuum pump connected on bellows sid

Chamber

XM, XY Series **Specific Product Precautions 2**

Be sure to read this before handling the products.

Maintenance

∧ Caution

- 1. When removing deposits from a valve, take care not to damage any of its parts.
- 2. Replace the bonnet assembly and the O-ring when the end of its service life is approached.
- 3. If damage is suspected prior to the end of the service life, perform early maintenance.

4. SMC specified parts should be used for service. Refer to the Construction/Maintenance parts table.

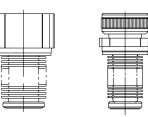

5. When removing seal material (such as valve, exterior seals), take care not to damage the sealing surfaces. When installing the valve and exterior seals, be sure that the O-ring is not twisted.

Maintenance Parts

\land Caution

1. The bonnet or handle assembly should also be replaced when changing the seal material.

Due to the different materials used, changing only the seal may prove inadequate.

Bonnet assembly

Handle assembly

Note 1) List the optional seal material symbol (refer to Table 1 below) after the model number, except for the standard seal material (FKM: compound no. 1349-80, produced by Mitsubishi Cable Industries, Ltd.) Note 2) An auto switch magnet is not attached. In cases where an auto switch magnet is attached, please add "-M9//" at the end of the part number. (Not available for high temperature models) Note 3) Auto switch and solenoid valve are not attached. When a set including auto switch and solenoid valve is required, please add the symbols after the auto switch in "How to Order" at the end of the part number.
