Rotary Clamp Cylinder

MK Series

ø12, ø16, ø20, ø25, ø32, ø40, ø50, ø63

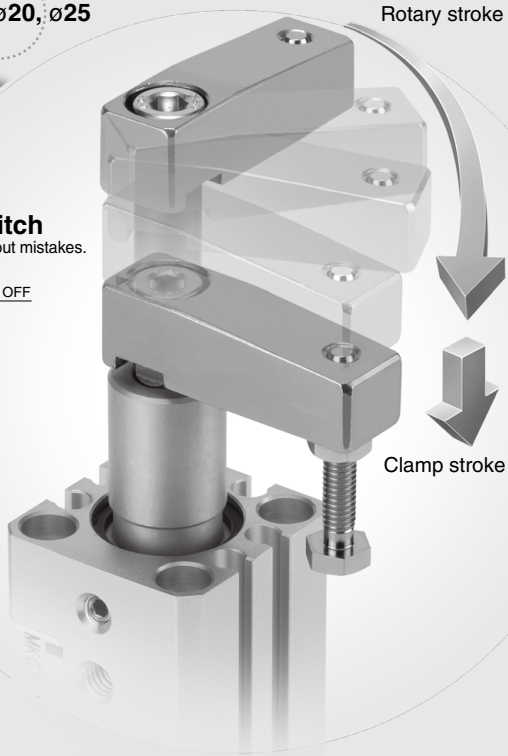
Allowable moment of inertia 3 times higher

New structure! MK series

Overall length is the same as the previous products! Mounting dimensions are interchangeable with the previous MK series.

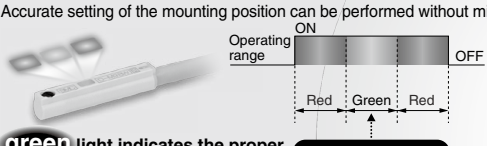
Possible to mount small auto switches on 4 surfaces

- Auto switches can be mounted on any of the **4** surfaces to suit the installation conditions (**2** surfaces for ø**20** and ø**25**).
- No projection of auto switch



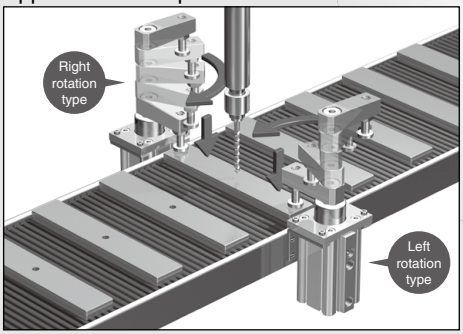
2-color indicator solid state auto switch

Accurate setting of the mounting position can be performed without mistakes.



A green light indicates the proper operating range.

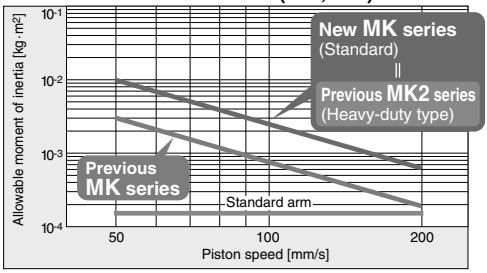
Application Example



Allowable moment of inertia 3 times higher

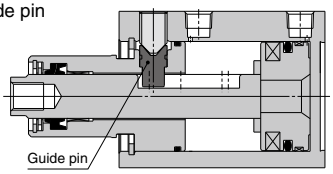
Allowable moment of inertia is the same as the heavy-duty MK2 series.

Allowable Moment of Inertia (ø32, ø40)



Maintenance can be performed for all sizes.

Seal kit and guide pin are replaceable.



Standard stroke range has been expanded.

Manufacturable strokes have been newly added, making a wide range of strokes available. (★ indicates the added strokes.)

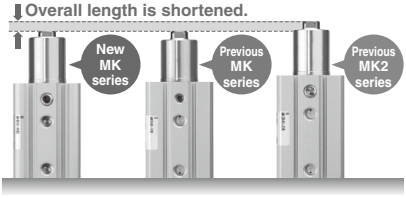
	Bore size	Stroke			
		10	20	30	50
MK	12	●	●	★	—
	16	●	●	★	—
	20	●	●	★	—
	25	●	●	★	—
	32	●	●	★	★
	40	●	●	★	★
	50	★	●	★	●
	63	★	●	★	●

Overall length is shortened.

(equivalent to the previous MK series)

3 to 10 mm shorter than the previous MK2 series, making the product more compact.

■Overall length comparison

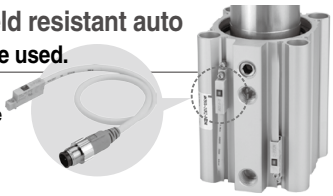


■Overall Length Dimensions

Bore size	Shortened dimensions (compared to the previous MK2 series)	MK series overall length (at 20st)
20	3 mm	112.5
25	5 mm	113.5
32	8 mm	133.5
40	8 mm	134.5
50	10 mm	152
63	10 mm	155

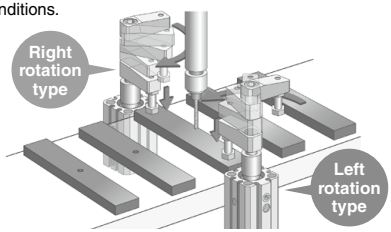
Magnetic field resistant auto switch can be used.

Applicable to the D-P3DWA type



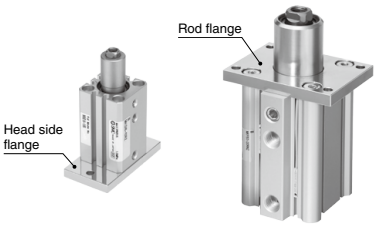
Clamping rotary direction can be selected from 2 types.

Clamping rotary direction can be selected to suit the setting conditions.



Mounting method

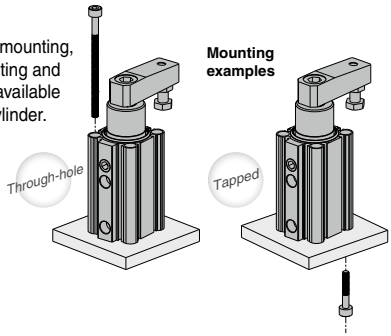
■Flange mounting



■Direct mounting

2 types of cylinder mounting, through-hole mounting and tap mounting, are available for mounting the cylinder.

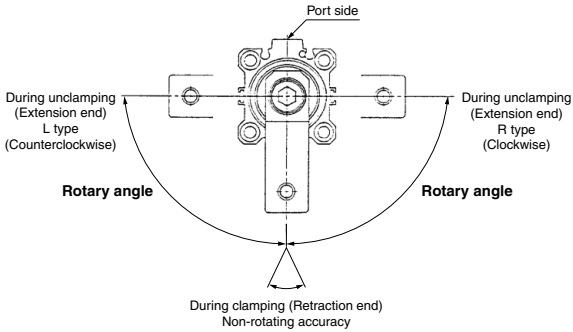
∗ For the tap mounting, the thread length is different from the previous product.



MK Series
Model Selection

Item		Series MK
Max. piston speed Note) **[mm/s]**	**ø12 to ø63**	200
Non-rotating accuracy (Clamp part)	**ø12**	±1.4°
	ø16 to ø25	±1.2°
	ø32, ø40	±0.9°
	ø50, ø63	±0.7°
Rotary angle		90°±10°
Horizontal mounting		Not allowed

Note) Maximum piston speed indicates the maximum speed possible when employing a standard arm.



Designing Arms

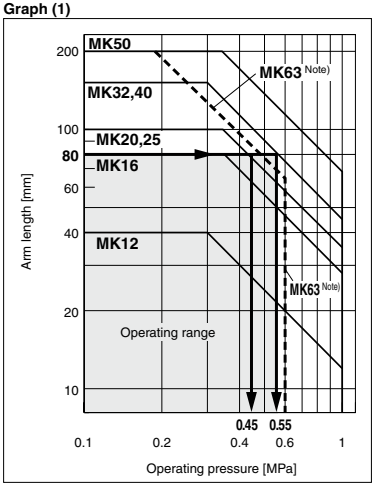
⚠Caution

When arms are to be made separately, their length and weight should be within the following range.

1. Allowable bending moment

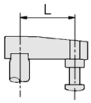
Use the arm length and operating pressure within **Graph (1)** for allowable bending moment loaded piston rod.

Graph (1)



● When the arm length is **80 mm**, pressure should be **MK20/25: 0.45 MPa or less**, **MK32/40: 0.55 MPa or less**.

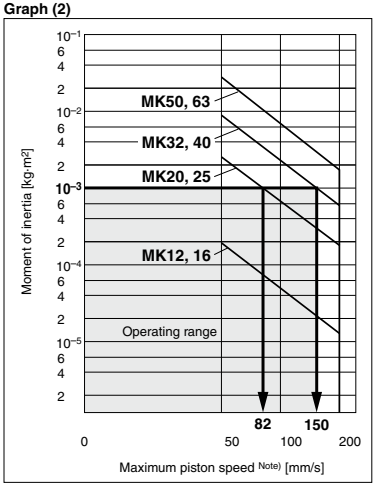
Note) Use ø63 within a pressure range from 0.1 to 0.6 MPa. If ø63 is used within a pressure range from 0.61 to 1 MPa, please use –X2071.



2. Moment of inertia

When the arm is long and heavy, damage of internal parts may be caused due to inertia. Use the moment of inertia and cylinder speed within **Graph (2)** based on arm requirements.

Graph (2)



● When the arm's moment of inertia is **1 x 10⁻³ kg·m²**, cylinder speed should be **MK20/25: 82 mm/s or less**, **MK32/40: 150 mm/s or less**.

● For calculating the moment of inertia, refer to page 401.

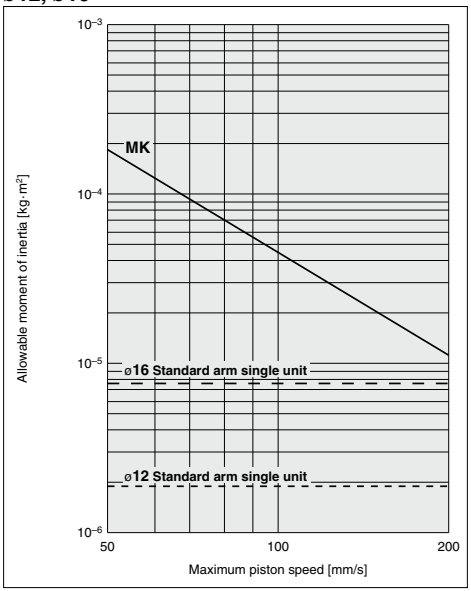
Note) Maximum piston speed is equivalent to approximately 1.6x the average piston speed. (Rough indication)

Moment of Inertia

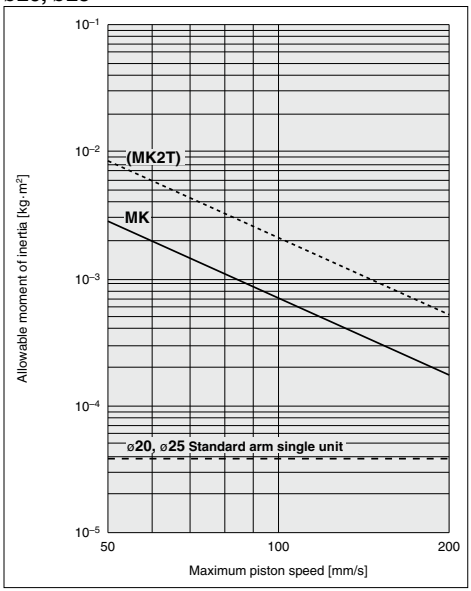
Note 1) Maximum piston speed is equivalent to approximately 1.6x the average piston speed. (Rough indication)
Note 2) The moment of inertia of the standard arm single unit is the value for the arm only. The values of accessories are not included.

Calculate the operating conditions and operate this product within the allowable range.
If the allowable range is exceeded, increase the bore size or use the MK2T series.
(Refer to page 419 for details of the MK2T series.)

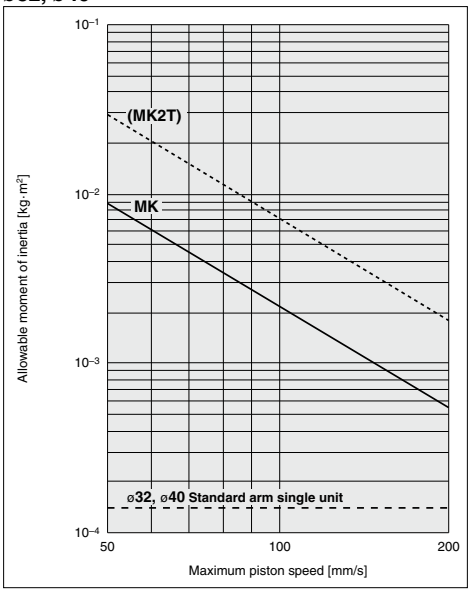
ø12, ø16



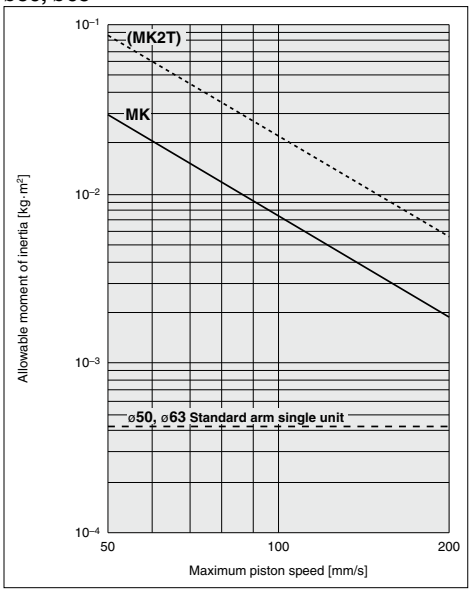
ø20, ø25



ø32, ø40



ø50, ø63



Moment of Inertia

Note) Maximum piston speed is equivalent to approximately 1.6x the average piston speed. (Rough indication)

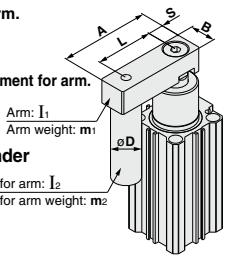
Calculation example when arms other than the options are used.

• Calculate the moment of inertia of the arm.

$$I_1 = m_1 \cdot \frac{A^2 + B^2}{12} + m_1 \cdot \left(\frac{A}{2} - S\right)^2$$

• Calculate the moment of inertia of the attachment for arm.

$$I_2 = m_2 \cdot \frac{D^2}{8} + m_2 \cdot L^2$$



<Calculation example> when the cylinder bore size is ø32.

A = 0.1 m **D** = 0.02 m
B = 0.03 m m_1 = 0.35 kg
S = 0.012 m m_2 = 0.15 kg
L = 0.076 m

$$I_1 = 0.35 \times \frac{0.1^2 + 0.03^2}{12} + 0.35 \times \left(\frac{0.1}{2} - 0.012\right)^2 = \mathbf{8.2 \times 10^{-4}\ kg \cdot m^2}$$

$$I_2 = 0.15 \times \frac{0.02^2}{8} + 0.15 \times 0.076^2 = \mathbf{8.7 \times 10^{-4}\ kg \cdot m^2}$$

• Calculate the actual moment of inertia.

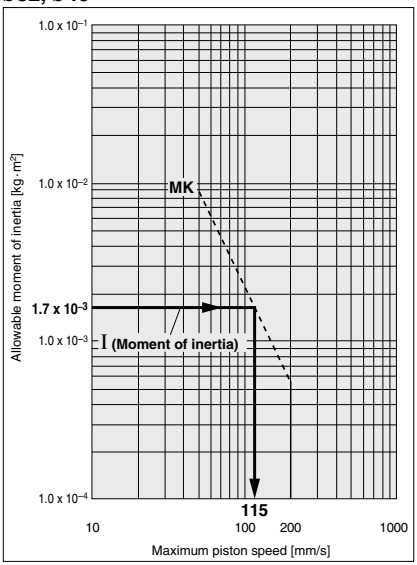
$$I = I_1 + I_2 = \mathbf{(8.2 + 8.7) \times 10^{-4} = 1.7 \times 10^{-3}\ kg \cdot m^2}$$

Calculation result (when the bore size is ø32 and clamp stroke is 10 mm.)

Model	Max. piston speed	Average piston speed Note 1)	Total stroke Note 2)	Stroke time Note 3)
MK	**115 mm/s**	72 mm/s	25 mm	0.35 seconds

Note 1) Average piston speed = Max. piston speed ÷1.6
Note 2) Total stroke = Clamp stroke + Rotary stroke
Note 3) Total stroke ÷ Average piston speed
The stroke time should be longer than the above mentioned stroke time.

ø32, ø40

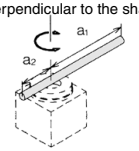


Calculation Equation List for Moment of Inertia

I: Moment of inertia [kg·m²] **m**: Load mass [kg]

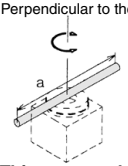
If arms other than the options are used, be sure to calculate the moment of inertia of the arm before selecting it.

1. Thin shaft
Position of rotational axis:
Perpendicular to the shaft, and attached near one end



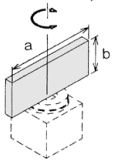
$$I = m_1 \cdot \frac{a_1^2}{3} + m_2 \cdot \frac{a_2^2}{3}$$

2. Thin shaft
Position of rotational axis:
Perpendicular to the shaft, and attached at the center of gravity



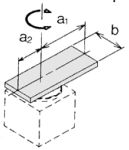
$$I = m \cdot \frac{a^2}{12}$$

3. Thin rectangular plate (Rectangular parallelepiped)
Position of rotational axis:
Parallel to side b, and attached at the center of gravity



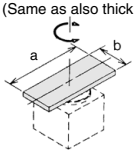
$$I = m \cdot \frac{a^2}{12}$$

4. Thin rectangular plate (Rectangular parallelepiped)
Position of rotational axis:
Perpendicular to the plate, and attached near one end



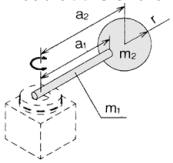
$$I = m_1 \cdot \frac{4a_1^2 + b^2}{12} + m_2 \cdot \frac{4a_2^2 + b^2}{12}$$

5. Thin rectangular plate (Rectangular parallelepiped)
Position of rotational axis:
Attached at the center of gravity, and perpendicular to the plate
(Same as also thick rectangular plate)



$$I = m \cdot \frac{a^2 + b^2}{12}$$

6. Load at the end of lever arm



$$I = m_1 \cdot \frac{a_1^2}{3} + m_2 \cdot a_2^2 + k$$

$$k = m_2 \cdot \frac{2r^2}{5}$$

Design/Selection

⚠Caution

1. Do not use the cylinder under the following environments:

- An area in which fluids such as cutting oil splash on the piston rod
- An area in which foreign matter such as particles, cutting chips, or dust is present
- An area in which the ambient temperature exceeds the operating range
- An area exposed to direct sunlight
- An environment that poses the risk of corrosion

2. A cylinder could malfunction or the non-rotating accuracy could be affected if a rotational force is applied to the piston rod. Therefore, observe the particulars given below before operating the cylinder.

1) Make sure to mount the cylinder vertically (**Fig. (1)**).
2) Do not absolutely perform any work (such as clamping or acting as a stopper, etc.) in the rotary direction (**Fig. (2)**).
3) To clamp, make sure to do so within the clamp stroke (straight-line stroke) (**Fig. (3)**).
4) Make sure that the clamping surface of the workpiece is perpendicular to the cylinder's axial line (**Fig. (4)**).
5) Do not operate the cylinder in such a way that an external force causes the workpiece to move while being clamped (**Fig. (5)**).
6) Furthermore, do not operate the cylinder in an application in which a rotational force will be applied to the piston rod.

1) Do not operate the cylinder horizontally.
When using the cylinder horizontally, use the MK2T series.

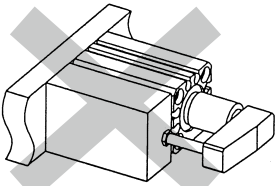


Fig. (1)

2) Do not perform any work in the rotary direction.

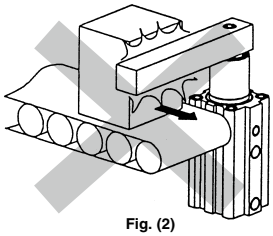

Fig. (2)

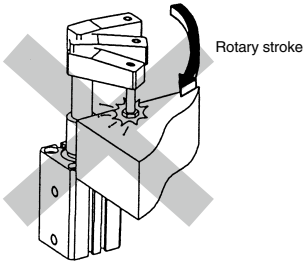
3) Do not clamp during the rotary stroke. Clamp should be performed within the clamp stroke.



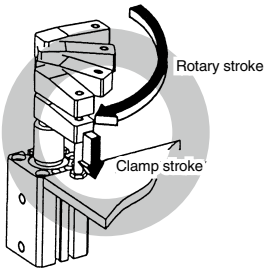


Fig. (3)

4) Do not clamp on a slanted surface.

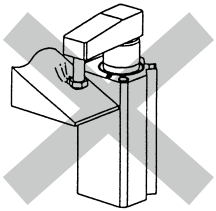

Fig. (4)

5) Make sure that the workpiece does not move during clamping.

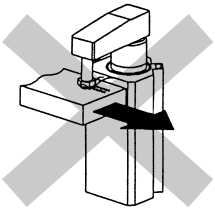

Fig. (5)

Rotary Clamp Cylinder: Standard

-20□Z		105	x 105L
-30□Z		115	x 115L
-50□Z		135	x 135L

Clamp Arm Mounting

⚠Caution

Use a clamp arm that is available as an option.

To fabricate a clamp arm, make sure that the allowable bending moment and the inertial moment will be within the specified range. Refer to Graph 1 and 2 on page 399.

Ensuring Safety

⚠Caution

If one side of the piston is pressurized by supplying air with the clamp arm attached, the piston will move vertically while the clamp arm rotates.

This operation could be hazardous to personnel, as their hands or feet could get caught by the clamp arm, or could lead to equipment damage. Therefore, it is important to secure as a danger zone a cylindrical area with the length of the clamp arm as its radius, and the stroke plus 20 mm as its height.

Clamp Arm Mounting and Removal

⚠Caution

When the arm is mounted onto or removed from the piston rod, do not fix the cylinder body, but hold the arm with a spanner when tightening or loosening the bolt (Fig. 1).

If the bolt is tightened with the cylinder body fixed, excessive rotation force will be applied to the piston rod, which may damage the internal components.

Note that when making an arm, machine it so that it engages with the width across flats on the rod end to prevent it from rotating.

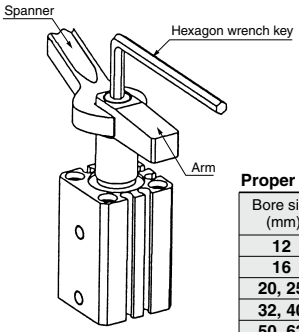

Fig. 1

Proper Tightening Torque

Bore size (mm)	Proper tightening torque (N·m)
12	0.5 to 0.7
16	2.8 to 3.5
20, 25	11.5 to 14.0
32, 40	24 to 30
50, 63	75 to 90

Flange Mounting

⚠Caution

The mounting bolt for the rod flange or head flange should be tightened to the torque shown in the table below.

Bore size	Thread size	Tightening torque
ø12, 16	M4 x 0.7	1.4 to 2.6 N·m
ø20 to 40	M6 x 1.0	9.0 to 12.0 N·m
ø50	M8 x 1.25	11.4 to 22.4 N·m
ø63	M10 x 1.5	25.0 to 44.9 N·m

	D-F79F		With diagnostic output (2-color indicator)	
	D-F7NT		With timer	

∗ With pre-wired connector is also available for solid state auto switches. For details, refer to pages 1410 and 1411.

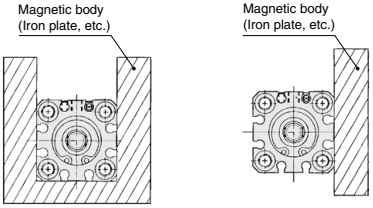
Mounting

⚠Caution

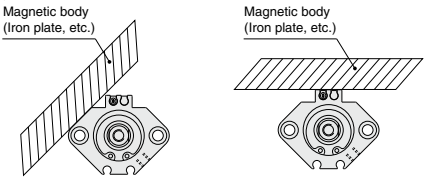
When a Magnetic Body Surrounds the Cylinder

- When a magnetic body surrounds the cylinder as shown in the figure below (including when the magnetic body is only on one side of the cylinder), the movement of the auto switch may become unstable, so please contact SMC.

ø12 to ø16
ø32 to ø63



ø20, ø25



With Magnetic Field Resistant Auto Switch D-P3DWA

- If welding cables or welding gun electrodes are in the vicinity of the cylinder, the magnets in the cylinder could be affected by the external magnetic fields. (Please contact SMC if the welding amperage exceeds 16000 A.) If the source of strong magnetism comes in contact with the cylinder with an auto switch, make sure to install the cylinder away from the source of the magnetism.
  If the cylinder is to be used in an environment in which spatter will come in direct contact with the lead wires, cover the lead wires with a protective tube. For the protective tube, use a tube I.D. ø7 or more, which excels in heat resistance and flexibility.
  Please contact SMC if an inverter welder or a DC welder will be used.

Made to Order: Individual Specifications 1

Please contact SMC for detailed dimensions, specifications and lead times.

Made to Order

1 Max. Operating Pressure 1.0 MPa

Symbol: -X2071

MK [Mounting] 63 – [Stroke] [Rotary direction] N Z – X2071

- Use this specification if the pressure is between 0.61 and 1.0 MPa when using MK□63-□□Z.
- The rod end and arm dimensions are different from those of the standard type. (Refer to the "Without arm" diagram below.) Be sure to use the dedicated MK-A063-X2071 arm assembly, and do not use the MK-A050Z standard arm.
- When manufacturing the arm, use the same design as the MK-A063-X2071 for the piston rod connecting part. (Refer to the "With arm" diagram below.)

Body option

Nil	Without arm
N	With arm

Max. operating pressure 1.0 MPa

Specifications

Bore size (mm)	63
Operating pressure range	0.1 to 1.0 MPa

∗ Specifications other than the above are the same as the standard.

2 Overall Length Is the Same as the Previous MK2 Series

Symbol: -X2094

MK [Mounting] [Bore size] – [Stroke] [Rotary direction] [Body option] Z – X2094

Overall length is the same as the MK2 series

- The overall length Q (from the end on the head side to the rod end) is the same as the MK2 series.

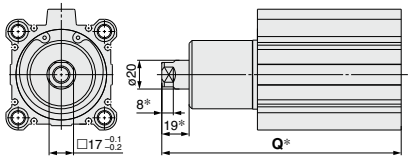
Applicable bore size/ Stroke

Bore size	Stroke
ø20	10, 20
ø25	
ø32	
ø40	20, 50
ø50	
ø63	

Construction/ Dimensions

(The outline dimensions shown are when the rod is retracted.) Dimensions other than those marked with "∗" are the same as the standard.

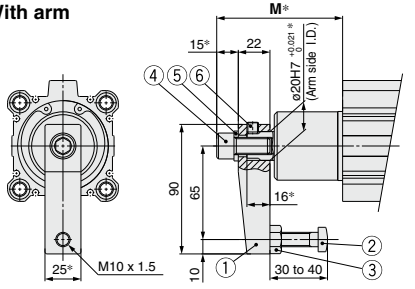
Without arm



(mm)

Model	Rod state	Q: Clamp stroke 10 mm	20 mm	30 mm	50 mm
MK□63-□Z-X2071	Retracted	146.5	166.5	186.5	226.5
	Extended	175.5	205.5	235.5	295.5

With arm



(mm)

Model	Rod state	M: Clamp stroke 10 mm	20 mm	30 mm	50 mm
MK□63-□Z-X2071	Retracted	77.5	87.5	97.5	117.5
	Extended	106.5	126.5	146.5	186.5

Arm assembly

MK-A063-X2071

Max. operating pressure 1.0 MPa

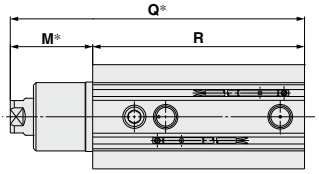
Arm Assembly Component Parts

No.	Description	Material	Note
1	**Arm**	Rolled steel	
2	**Clamp bolt**	Chromium molybdenum steel	
3	**Hexagon nut**	Rolled steel	
4	**Hexagon socket head cap screw**	Chromium molybdenum steel	M12 x 25L
5	**Spring washer**	Hard steel	
6	**Hexagon socket head set screw**	Chromium molybdenum steel	Flat point M8 x 8L

∗ The arm assembly consists of the parts No.1 to 6.

Dimensions

(The outline dimensions shown are when the rod is retracted.) Dimensions other than those marked with "∗" are the same as the standard.



(mm)

Bore size	Rod state	Clamp stroke 10 mm Q	R	M	20 mm Q	R	M	50 mm Q	R	M
