

High Purity Chemical Liquid Valve Non-Metallic Exterior

LVQ Series

Clean Wet Series

The LQ2 insert/integrated fitting type space-saving fitting for the LVQ series high-purity chemical liquid valve is to be discontinued as of March 2025. Select the LQ1 fitting instead.

Screwless construction

Non-metallic construction without using metal screws to fasten the body of the actuator.

Body: **New PFA**
 Diaphragm: **PTFE**
 Actuator: **PVDF**

Additional Variations for the LVQ Series!

- Insert bushing, LQ1 integrated fitting type Hyper fitting **LVQ-V Series**

- Flare, LQ3 integrated fitting type Hyper fitting **LVQ-Z Series**

- Manually operated **LVQH Series**

- Tube extension type **LVQ-T Series**

- High purity chemical liquid valves, High back pressure (0.5 MPa) tolerant Added the **LVQ□□H** series.
- Additional options
 High temperature (Max. 170°C), Buffer material FFKM, Ammonium hydroxide compatible, High flow type

● **Added manual type.**
Two types of handle operation methods can be selected.

90° turn type

- Enables quick valve open/close switching operation.

Multi-turn type

- The handle will spin loosely at the fully-open and fully-closed positions of the valve. This prevents overtightening.
- An indicator enables easy visual check of the open/closed state of the valve.
- The valve opening position can be freely set using a lock nut.

Diaphragm (PTFE)

Special diaphragm construction ensures gentle opening and closing that prevents the formation of micro-bubbles.

Minimal residual liquid

Residual liquid is minimized by the tapered shape and integrated fitting construction, allowing liquid to flow smoothly, achieving improved flow-through characteristics.

Body (New PFA)

Compatible with chemicals such as acids, bases and super pure water.

Guide ring

Eliminates lateral motion of the poppet which reduces internal leakage.

Piston damper

Absorbs piston momentum to minimize impact-induced particle generation.

Buffer

Protects diaphragm from deformation and damage due to back pressure.

Integrated fitting construction

Offers quadruple seal construction. Nut lock mechanism—no additional tightening required. High flexural strength. Different tubing sizes can be selected.

Standard Specifications

⚠ Specific Product Precautions

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 845 and 846 for Air Operated Chemical Liquid Valve Precautions.

Piping

⚠ Caution

1. Connect tubing by special tools.

For information on tubing connection and special tools, please see the pamphlet "High Purity Fluoropolymer Fittings Hyper Fitting LQ1/2 Series Work Procedure Instructions" (M-E05-1). (The pamphlet can be downloaded from the SMC home page.)

2. Tighten the nut until it touches the end surface of the body, and then tighten it an additional 1/8 turn. If the nut won't turn any further, then it means a sufficient tightening has occurred. Refer to the proper tightening torques shown below.

Tightening Torque for Piping

Air Operated Insert Bushing, Integrated Fitting Type Space Saving/Space Saving Connection **LVQS Series**

RoHS

The LQ2 insert/integrated fitting type space-saving fitting for the LVQ series high-purity chemical liquid valve is to be discontinued as of March 2025. Select the LQ1 fitting instead.

⚠ Caution

1. Connect tubing by special tools.

For information on tubing connection and special tools, please see the pamphlet "High Purity Fluoropolymer Fittings Hyper Fitting LQ1/2 Series Work Procedure Instructions" (M-E05-1). (The pamphlet can be downloaded from the SMC home page.)

Changing the tubing size

Example) Changing the tubing from an O.D. 1/4" to O.D. 1/8" within the body class 2.

Prepare an insert bushing and nut for 1/8" O.D. tubing (LQ-2U03) and change the tubing size.

(Refer to How to Order Fitting Parts.)

Note) Tubing is sold separately.

Piping

⚠ Caution

1. Connect tubing by special tools.

For information on tubing fittings and special tools, please see the pamphlet "High Purity Fluoropolymer Fittings Hyper Fitting Flare Type LQ3 Series Fitting Procedure" (M-E06-4). (The pamphlet can be downloaded from the SMC home page.)

2. Tighten the nut until it touches the end surface of the body, and then tighten it an additional 1/8 turn. If the nut won't turn any further, then it means a sufficient tightening has occurred. Refer to the proper tightening torques shown below.

⚠ Specific Product Precautions

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 845 and 846 for Air Operated Chemical Liquid Valve Precautions.

Piping

⚠ Caution

1. Tighten the nut until it touches the end surface of the body, and then tighten it an additional 1/8 turn. If the nut won't turn any further, then it means a sufficient tightening has occurred. Refer to the proper tightening torques shown below.

Tightening Torque for Piping

⚠ Specific Product Precautions

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 845 and 846 for Air Operated Chemical Liquid Valve Precautions.

Piping

⚠ Caution

1. Connect tubing by special tools.

For information on tubing connection and special tools, please see the pamphlet "High Purity Fluoropolymer Fittings Hyper Fitting LQ1/2 Series Work Procedure Instructions" (M-E05-1) and "High Purity Fluoropolymer Fittings Hyper Fitting/Flare Type LQ3 Series Fitting Procedure" (M-E06-4). (The pamphlet can be downloaded from the SMC home page.)

2. Tighten the nut until it touches the end surface of the body, and then tighten it an additional 1/8 turn. If the nut won't turn any further, then it means a sufficient tightening has occurred. Refer to the proper tightening torque shown below.

Tightening Torque for Piping

Body class	Torque (N·m)		
	LQ1	LQ2	LQ3
2	0.3 to 0.4	1.5 to 2.0	1.6 to 1.8
3	0.8 to 1.0	3.0 to 3.5	3.2 to 3.5

The material and fluid compatibility check list provides reference values as a guide only.

Note 1) Since static electricity may be generated, implement suitable countermeasures.

Note 2) Use caution as permeation may occur. The permeated fluid may effect the parts of other materials.

- Compatibility is indicated for fluid temperatures of 100°C or less.
- The material and fluid compatibility check list provides reference values as a guide only, therefore we do not guarantee the application to our product.
- The data above is based on the information presented by the material manufacturers.
- SMC is not responsible for its accuracy and any damage happened because of this data.
- Use a fluid with a viscosity of 300 cp or less. Failure to do so may cause valve closing failure.

Air Operated Chemical Liquid Valve/Precautions 1

Be sure to read this before handling the products.

Design / Selection

Warning

1. Confirm the specifications.

Give careful consideration to operating conditions such as the application, fluid and environment, and use within the operating ranges specified in this catalog.

2. Fluids

Operate after confirming the compatibility of the product's component materials with fluids, using the check list on page 844. Contact SMC regarding fluids other than those in the check list. Operate within the indicated fluid temperature range.

3. Maintenance space

Ensure the necessary space for maintenance and inspections.

4. Fluid pressure range

Keep the supplied fluid pressure within the operating pressure range specified in this catalog.

5. Ambient environment

Install the product in an environment where there is no effect from radiant heat caused by heat sources, etc., and use within the ambient operating temperature range. After confirming the compatibility of the product's component materials with the ambient environment, operate so that fluid does not adhere to the product's exterior surfaces.

6. Liquid seals

When circulating fluid

Provide a relief valve in the system so that fluid does not get into the liquid seal circuit.

7. Countermeasures for static electricity

Since static electricity may be generated depending on the fluid being used, implement suitable countermeasures.

Mounting

Warning

1. If air leakage increases or equipment does not operate properly, stop operation.

After mounting, perform suitable function and leak tests to confirm that the mounting is correct.

2. Operation manual

Mount and operate the product after reading the manual carefully and understanding its contents. Also, keep the manual where it can be referred to as necessary.

Piping

Caution

1. Preparation before piping

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe.

Install piping so that it does not apply pulling, pressing, bending or other forces on the valve body.

2. Use the tightening torques shown below for the threaded pilot port.

Tightening Torque for Pilot Port

Pilot port	Torque (N·m)
Rc, NPT 1/8	0.8 to 1.0

3. Metal fittings

In the case of threaded pilot port, do not pipe the metal fittings which can cause damage to the thread part.

4. For information on tubing connection and special tools, please see the pamphlet "High Purity Fluoropolymer Fittings Hyper Fitting LQ1/2 Series Work Procedure Instructions" (M-E05-1) or "High Purity Fluoropolymer Fittings Hyper Fitting/Flare Type LQ3 Series Fitting Procedure" (M-E06-4). (The pamphlets can be downloaded from the SMC home page.)

Operating Air Supply

Warning

1. Use clean air.

Do not use compressed air which includes chemicals, synthetic oils containing organic solvents, salt, or corrosive gases, etc., as this may cause damage or malfunction.

Use of Tubing

⚠ Caution

1. Refer to the applicable tubing sizes shown below for tubing to be used.

Applicable tubing sizes

	Connection tubing size	O.D. (mm)		Internal thickness (mm)		
		Standard size	Tolerance	Standard size	Tolerance	
Metric sizes	ø3 x ø2	3.0	+0.2 -0.1	0.5	±0.06

Inch sizes	ø19 x ø16	19.0	+0.3 -0.1	1.5	±0.15	
	ø25 x ø22	25.0				
	1/8" x 0.086"	3.18		0.5		±0.1
	3/16" x 1/8"	4.75				
	1/4" x 5/32"	6.35				
	3/8" x 1/4"	9.53		1.2		±0.12
	1/2" x 3/8"	12.7				
3/4" x 5/8"	19.0					
1" x 7/8"	25.4	1.6	±0.15			

Operating Environment

⚠ Warning

1. Do not use in a location having an explosive atmosphere.
2. Do not use in locations where vibration or impact occurs.
3. Do not use in locations where radiated heat will be received from nearby heat sources.
4. Do not use in environments which exceed the ambient temperature specifications of the product.

Maintenance

⚠ Warning

1. Maintenance should be performed in accordance with the procedures in the operation manual.

Incorrect handling can cause damage or malfunction of machinery and equipment, etc.

2. Before removing equipment or compressed air supply/exhaust devices, shut off the air and power supplies, and exhaust compressed air from the system.

Further, when restarting equipment after re-mounting or replacement, first confirm safety and then check the equipment for normal operation.

3. Perform work after removing residual chemicals and carefully replacing them with pure water or air, etc.
4. Do not disassemble the product. Products which have been disassembled cannot be guaranteed.

If disassembly is necessary, contact SMC.

5. In order to obtain optimum performance from valves, perform periodic inspections to confirm that there are no leaks from valves or fittings, etc.

Maintenance

⚠ Caution

1. Removal of drainage

Flush drainage from filters regularly.

Precautions

⚠ Warning

1. Operate within the ranges of the maximum operating pressure and back pressure.
2. Do not change the pilot port direction. Products which have been disassembled cannot be guaranteed.

⚠ Caution

1. Please note that when the product is shipped from the factory, gases such as N₂ and air may leak from the valve at a rate of 1 cm³/min (when pressurized).
2. When operated at a very low flow rate, the product with flow rate adjustment may vibrate, etc. depending on the operating conditions. Therefore, operate only after careful examination of the flow rate, pressure and piping conditions.
3. Water hammering may occur depending on the fluid pressure conditions. In most cases, improvement is possible by adjusting the pilot pressure with a speed controller, etc., but the flow rate, pressure and piping conditions should be reviewed.
4. To adjust the flow rate with flow rate adjustment, open gradually starting from the fully closed condition.

Opening is accomplished by turning the adjustment knob counterclockwise. Additionally, do not apply any unreasonable force to the adjustment handle when nearing a fully opened or closed condition. This may result in deformation of the orifice sheet surface or damage to the threaded part of the adjustment handle.

The handle is in the fully closed condition when the product is shipped from the factory.

In addition, do not apply excessive force to the adjustment knob even when the lock nut is in a tightened state. Operate the adjustment knob when the lock nut is in a loosened state.

5. After long periods of nonuse, perform a test run before beginning regular operation.
6. Since the product is packaged in a clean room, use sufficient care in handling when opened.

Return of Product

⚠ Warning

If the product to be returned is contaminated or is possibly contaminated with substances that are harmful to humans, for safety reasons, please contact SMC beforehand and then employ a specialist cleaning company to decontaminate the product. After the decontamination prescribed above has been carried out, submit a Product Return Request Sheet or the Detoxification/Decontamination Certificate to SMC and await SMC's approval and further instructions before attempting to return the item.

Please refer to the International Chemical Safety Cards (ICSC) for a list of harmful substances.

If you have any further questions, please don't hesitate to contact your SMC sales representative.
