Electric Actuator

CE marking

1. The combination of Series LC6D and Series LX has been certified for CE marking.

When using Series LX with CE marking, use it in combination with Series LC6D with CE marking.

2. The combination of Series LC6D and Series LX has been certified for EMC conformity.

EMC changes depending on the customer's control panel configuration, and the relationship between other electrical equipment and wiring. Therefore, conformity cannot be certified for the customer's equipment in the actual operating environment. As a result, it is necessary for the customer to verify final EMC conformity for the machinery and equipment as a whole.

⚠ Caution

Maximum speeds of actuators vary depending on the type. Observe the maximum speed of the actuator in use.

How to Order

[Option]

LC 6 D – 220 A D – ☐

Applicable motor

6	Stepper motor

Function

D	Driver function only

Motor type

220	2 phase motor (2.0 A/phase)
507	5 phase motor (0.75 A/phase)

CE marking/Input method

Nil	Standard	2 pulse input method
Q	CE marking	
P1-X316	CE marking	1 pulse input method

Driver power supply

D	24 VDC

Input/Output type

A	Photo coupler input/output

Applicable Actuators

Driver model	Applicable actuator		Motor type
LC6D-220AD-☐	Guide rod type	LXPB2	2 phase stepper motor
	High rigidity slide table type	LXSH2	
LC6D-507AD-☐	Low profile slide table type	LXFH5	5 phase stepper motor
	High rigidity slide table type	LXSH5	
	Guide rod type	LXPB5	

Specifications

Part no.	LC6D-220AD-☐	LC6D-507AD-☐
Power supply	24 VDC ±10%, 3 A	24 VDC ±10%, 2.5 A
Energization (Step angle °)	Full step (1.8°) Half step (0.9°)	Full step (0.72°) Half step (0.36°)
Motor current	2.0 A/phase	0.75 A/phase
Input signal	Photo coupler input (Input impedance 330 Ω)	
Maximum input frequency	10 kHz for full step 20 kHz for half step	
Function	Auto current down, Power down input	
Connection method	Connector	
Ambient temperature	5° to 40°C	
Ambient humidity	35 to 85% (No condensation)	
Accessories	Connectors: LC6-1-C1 (Receptacle, female terminal) Cable should be arranged by customer.	

Pulse input signal method

Part no.	Input signal method
LC6D-☐☐☐AD **LC6D-☐☐☐AD-Q**	2 pulse input method
LC6D-☐☐☐AD-P1-X316	1 pulse input method

⊗SMC

Pulse Signals

LC6D positioning is controlled by the number of pulse signal inputs to the CW(CK) and CCW(U/D) terminals, and speed is controlled by pulse frequencies.

• Calculation for speed and pulse frequencies
 **Pulse frequency [pps] = (Speed [mm/s]/Lead [mm]) x Divisions per rotation**

• Calculation for moving distance and pulse numbers
 **Pulse numbers = (Moving distance [mm]/Lead [mm]) x Divisions per rotation**

• The divisions per rotation are as shown in the table below.

Driver	Energization type	Divisions per rotation
LC6D-220AD-□	Full step	200
	Half step	400
LC6D-507AD-□	Full step	500
	Half step	1000

Dimensions
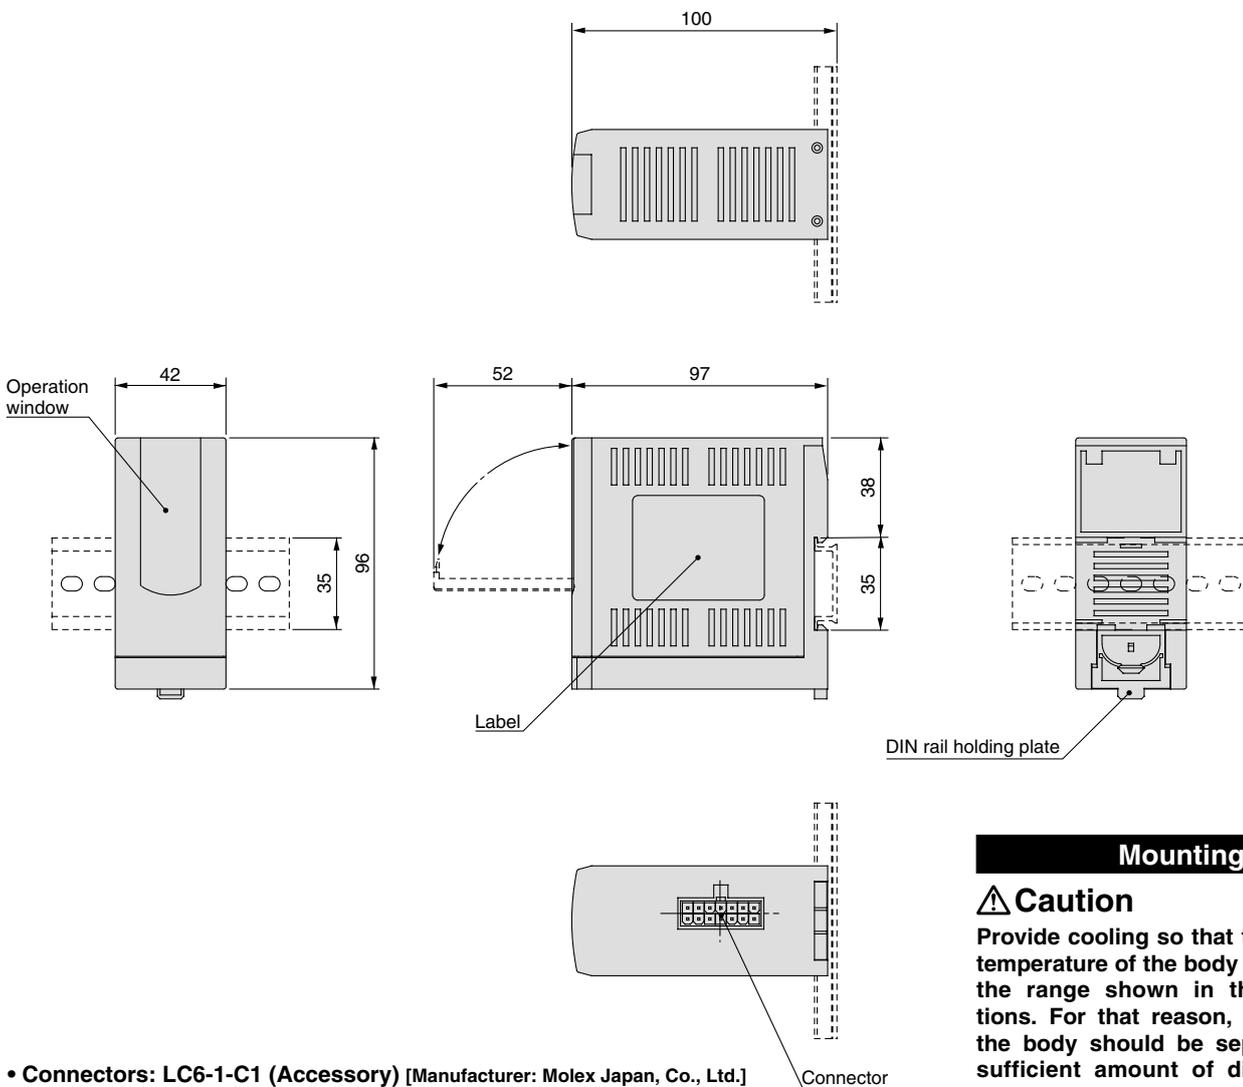

• **Connectors: LC6-1-C1 (Accessory)** [Manufacturer: Molex Japan, Co., Ltd.]

Description	Part no.	Quantity
Receptacle	5557-14R	1
Female terminal	5556PBTL	14

• **Wiring tools** [Manufacturer: Molex Japan Co., Ltd.]
  Wiring tools should be arranged by the customer.

Description	Part no.
Crimping tool	57026-5000 (for UL1007) 57027-5000 (for UL1015)
Puller	57031-6000

Mounting

⚠ **Caution**

Provide cooling so that the operating temperature of the body will be within the range shown in the specifications. For that reason, each face of the body should be separated by a sufficient amount of distance from other construction or components.

965
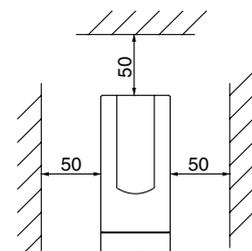

Series LC6D

Connection Examples

● Electrical wires

──────── 0.5 mm² or larger (AWG18 to 20)
─────── 0.2 mm² or larger (shielding wire) (AWG18 to 24)

Functions

● Function change-over switch

Use the function change-over switch to set each function. It is set as follows when shipped.

ON
OFF 1 2
1. ON ····· Energization type: Half step
2. OFF ··· Auto current down function

	ON	OFF
1	Half step	Full step
2	Release	Set

Function change-over switch
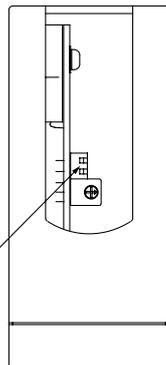

● Input signal terminal

- **CW pulse input terminal (LC6D-□□□AD, LC6D-□□□AD-Q)**
  By applying the pulse input, the actuator moves from the motor side to the end side.
- **CCW pulse input terminal (LC6D-□□□AD, LC6D-□□□AD-Q)**
  By applying the pulse input, the actuator moves from the end side to the motor side.
- **CK pulse input terminal (LC6D-□□□AD-P1-X316)**
  By applying the pulse input, the actuator moves.
- **UD direction input terminal (LC6D-□□□AD-P1-X316)**
  By switching ON/OFF, the movement direction of the actuator changes.
- **Power down input terminal**
  By applying the "H" level input, the motor current is shut off and the motor becomes de-energized.

● Functions

- **Auto current down**
  This is a function that reduces the motor current to half when the motor stops. This will prevent the motor and driver from generating heat.
  Although auto current down causes the holding torque to be reduced when the motor stops, the holding torque that supports the actuator transfer load is maintained.

- **Power down**
  This function shuts off the motor current and de-energizes the motor. Use this function to release the electric actuator for maintenance, etc.

∗ Select a 3 wire NPN type when using an auto switch.

Specifications

Part no.	LC6C-220AD
Power supply	24 VDC ±10%, Max. 3.0 A
Number of position settings	28 patterns
Position setting method	Setting with dedicated teaching box (LC5-1-T1-02)
Position control method	Absolute and incremental moves Speed: 6 to 200 mm/s (with lead screw lead of 12 mm)
Input signal capacity	Photo coupler input 24 VDC, Max. 6 mA
Output signal capacity	Photo coupler output Max. 30 VDC or less, Max. 20 mA
Parameter setting	Position data setting, Speed/Acceleration setting, etc.
Indication LED	Power supply LED (Green), Alarm LED (Red)
Operating temperature	5° to 40°C
Accessories	Power connector: LC6-1-C2, Interface connector: LC6-1-C3 (Cables should be arranged by customer.)

Absolute and incremental moves for each movement pattern.

Absolute move: Moving from the home position to the desired position.

Home position   A   B   C

Incremental move: Repeatedly moving a prescribed distance.

A   A   A   A   A

Two pattern combination example (A five point movement of absolute move A and incremental move B)

B   B   B   B

Home position   A
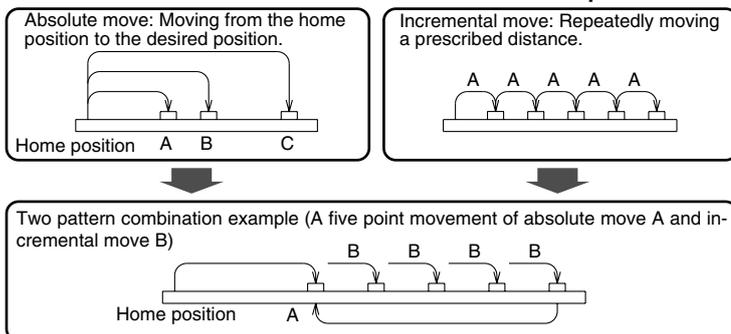

Eight speed patterns based on the speed number and acceleration number can be set, and a speed pattern can be selected for each movement pattern.

Connection Example

Wiring to the teaching box

By connecting multiple drivers (maximum of 16), they can be set by one teaching box.
(When the teaching box is in use, external input to the drivers becomes invalid.)

Connect to communication connector 1.

14	Point output C	This signal indicates move completion for point input C.
15	Point output D	This signal indicates move completion for point input D.
16	READY output	This signal indicates that the controller is ready.
17	BUSY output	This signal indicates motor control in progress.
18	Home position return output	This signal indicates that home position return is completed.
19	Alarm output	This signal indicates occurrence of alarm.
20	N.C.	Do not connect.

⚠**Caution**
  If input is not provided as prescribed for the operation, this may cause malfunction or failure.

Series *LC6C*

<div style="display: flex;">

<div>

Home Position Return

1 Operation

Home position sensor position
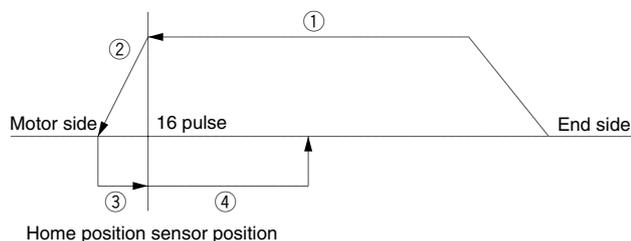

① Moves to the motor side at home position return speed
② Decelerates and stops at the home position sensor ON position
③ Moves to the end side at low speed
④ Moves and stops at 16 pulse position from the home position sensor OFF position

2 Operating procedures

1. Confirm that both READY output and alarm output are ON.
2. Turn OFF bank inputs 1 to 3. [Specify bank 0.]
3. When point input A is turned ON, the actuator begins to return to the home position.
4. BUSY output is turned ON during home position return.
5. BUSY output is turned OFF when the actuator reaches the home position, and home position return output turns ON.
6. Turn OFF point input A.

Note) The actuator stops if point input A is turned OFF when BUSY output is ON (home position return movement in progress).

3 Home position return speed

Speed is set by parameter number 0D.

1.	015
Acceleration no.	Speed no.

4 Home position return signal

This signal output turns ON when the home position return movement completes. It turns OFF when an alarm occurs or when JOG movement takes place.

5 Time chart

</div>

<div>
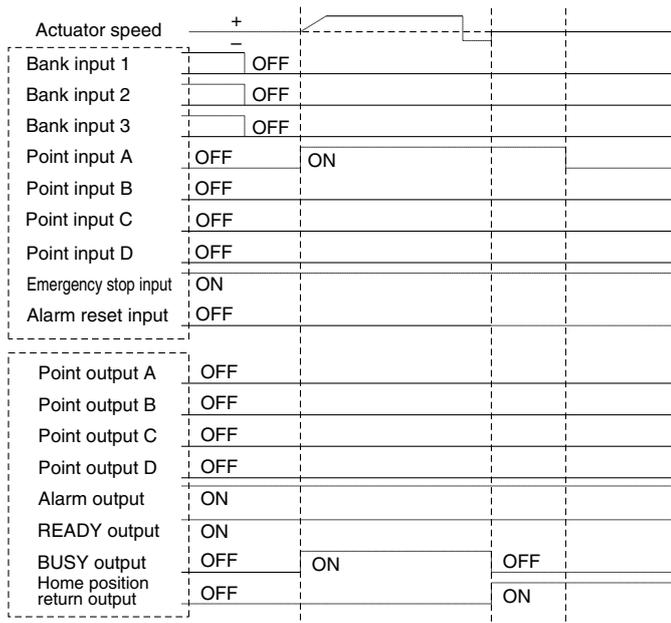

Point Movement

With this driver, a maximum of 28 point positions can be set by combining banks and points. With the combination of bank and point inputs, the actuator can move to the position indicated by each point.

1 Setting detail

To set point settings, use the parameter setting and teaching functions of the dedicated teaching box.

Parameter no. | 1 | A |
Bank Point

| 0. | 1. | 0 0 0 0 0 0 |
Coordinate attribute   Speed pattern   Coordinates
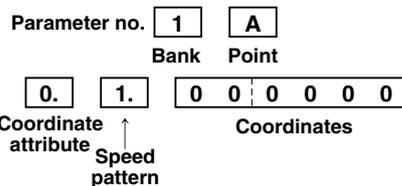

2 Operating procedures

1. Confirm that both READY output and alarm output are ON.
2. Set bank with bank inputs 1 to 3. [Bank 1 to 7.]
3. When points are specified with point inputs A to D, the actuator starts to move.
4. BUSY output is ON while the actuator is moving.
5. BUSY output turns OFF when the move completes and point outputs A to D turn ON. These correspond to point inputs A to D that are ON.
6. When point inputs A to D are turned OFF, point outputs A to D turn OFF.

Note) The actuator stops moving if point inputs A to D are turned OFF or two or more of point inputs A to D are turned ON while BUSY output is ON (during movement).

3 Time chart (when specifying point B)

Dedicated Teaching Box/LC5-1-T1-02

Performance/Specifications

General specifications

Part no.	**LC5-1-T1-02**
Power supply	Supplied by **LC6C-220AD**
Dimensions (mm)	130 x 50 x 21
Mass (g)	110
Body type	Resin body
Indication unit	7 LED numerical indicators, 9 LED indicator lights
Operation unit	Key switches
Cable length	2 m

Basic performance

|	Performance/Specifications
Applicable controller	**LC6C-220AD**
Operating temperature range	5° to 40°C
Communication method	Conforming to RS485
Functions	Parameter change, JOG operation, alarm reset, teaching, test
Protective function indication	Alarm code

Dimensions
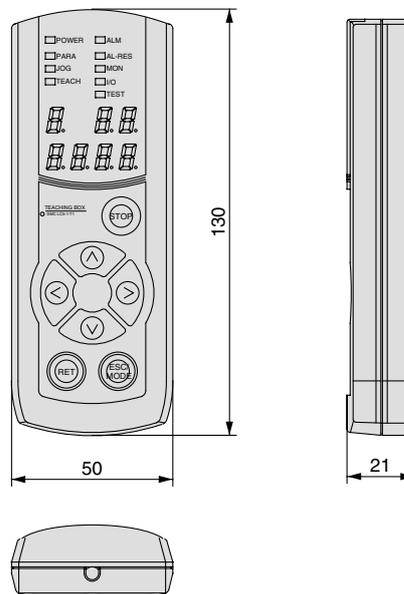

Series *LC6C*

Part Descriptions

Power supply LED (Green)
ID number

Alarm LED (Red)
Mode indication LED [7] (Orange)
Parameter (2 digits)
Data indication (4 digits)
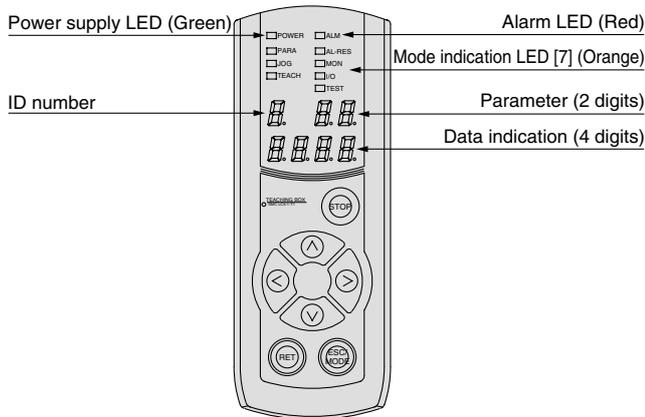

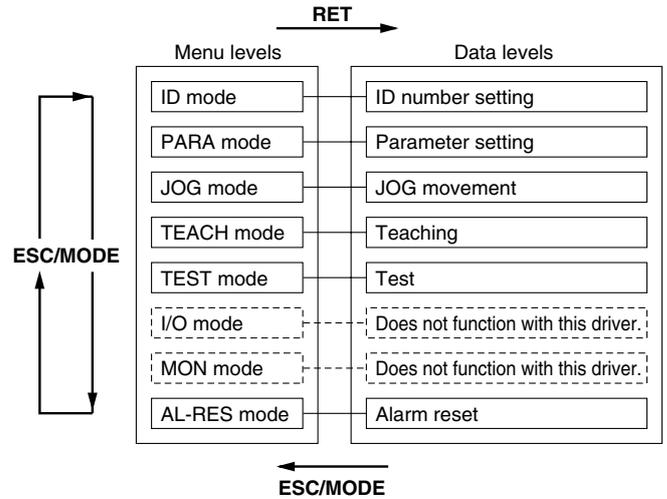

Key Arrangement and Functions

| Mark	Key description	Function
∧	UP	Increases a numerical value.
∨	DOWN	Reduces a numerical value.
<	L	Moves a numerical value place to the left. Rotates the motor counter clockwise during JOG operation.
>	R	Moves a numerical value place to the right. Rotates the motor clockwise during JOG operation.
STOP	STOP	Becomes the emergency stop key when the actuator is moving.
ESC/MODE	ESC/MODE	Selects a mode. Completes each mode and returns to the mode level.
RET	RET	Determines the mode and records data.

⚠ **Caution**
STOP key only stops the driver that is in communication.

Alarm Details

Alarm no.	Alarm description	Presumed cause and solution
1	Emergency stop input	Emergency stop input is turned OFF (open).
2	Temperature abnormality	The temperature inside the driver is high. Check the installation environment and operation frequency.
3	Power supply abnormality	Operating beyond the range of the specified power supply. Adjust the power supply.
4	Limit switch abnormality	Home position switch and limit switch are operating. Malfunction such as loss of synchronism may have occurred. Check the equipment.

Operating Method

Menu levels	Data levels
ID mode	ID number setting
PARA mode	Parameter setting
JOG mode	JOG movement
TEACH mode	Teaching
TEST mode	Test
I/O mode	Does not function with this driver.
MON mode	Does not function with this driver.
AL-RES mode	Alarm reset

As shown above, 6 modes are available. (I/O mode and MON mode do not function with this driver.) When the communication mode is started by the teaching box, a menu can be selected with [ESC/MODE]. Select the mode indication LED for the mode to be implemented (all mode indication LEDs turn Off in the ID mode) and press [RET] to start each mode.
Refer to the instruction manual for the operation of each mode.
