

ORIGINAL INSTRUCTIONS

Instruction Manual
Coolant Valve
Series SGH(A)

The intended use of this valve is to control the supply of liquid coolant.

1 Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC) ⁽¹⁾, and other safety regulations.

- ⁽¹⁾ISO 4414: Pneumatic fluid power - General rules and safety requirements for systems and their components.
- ISO 4413: Hydraulic fluid power - General rules and safety requirements for systems and their components.
- IEC 60204-1: Safety of machinery - Electrical equipment of machines. Part 1: General requirements
- ISO 10218-1: Robots and robotic devices - Safety requirements for industrial robots - Part 1: Robots
- Refer to product catalogue, Operation Manual and Handling Precautions for SMC Products for additional information.
- Keep this manual in a safe place for future reference.

Danger	Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.
Warning	Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.
Caution	Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

Warning

- Always ensure compliance with relevant safety laws and standards.
- All work must be carried out in a safe manner by a qualified person in compliance with applicable national regulations.
- If this equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Caution

- The product is provided for use in manufacturing industries only. This product must not be used in residential areas.

2 Specifications

2.1 Valve specifications

Valve	SGH(A)-30	SGH(A)-70	SGH(A)-100	SGH(A)-140
Type	3-port	N.C., N.O., 3-port	N.C.	
Fluid	Coolant			
Pilot fluid	Air			
Operating pressure range [MPa]	0 to 3	0 to 7	0 to 10	0 to 14
External pilot operating pressure range [MPa]	0.25 to 0.7			0.35 to 0.7
Proof pressure [MPa]	4.5	10.5	15	21
Fluid temperature [°C]	-10 to 60 (No freezing)			
Ambient temperature [°C]	-10 to 50 (No freezing)			
Flow characteristics	Refer to catalogue			
Leakage [cm ³ /min]	20 or less			

2 specifications - continued

Response time [ms] ^{Note 1)}	Contact SMC
Duty cycle	
Min. operating frequency	1 cycle / 30 days
Max. operating frequency [Hz]	Contact SMC
Manual override	Non-locking push / Push-turn locking slotted type
Lubrication	Not required
Impact/Vibration resistance [m/s ²] ^{Note 2)}	150/30
Mounting orientation	Restricted (Refer to section 3.8)
Wetted parts	Cast iron, Stainless steel
Weight	Refer to catalogue

Table 1.

Note 1) Response time depends on the pilot valve, pressure, and piping conditions.

Note 2) Impact resistance: No malfunction occurred when it was tested with a drop tester in the axial direction and at right angles to the main valve and armature; in both energized and de-energized states and for every time in each condition. (Values quoted are for a new valve)

Vibration resistance: No malfunction occurred in a one-sweep test between 45 and 2000 Hz. Tests are performed at both energized and de-energized states in the axial direction and at right angles to the main valve and armature. (Values quoted are for a new valve).

2.2 Solenoid specifications

Pilot valve	V116-###-1	
Coil rated voltage	DC [VDC]	12, 24
	AC [VAC]	100, 110 (115), 200, 220 (230) ^{Note 1)}
Electrical entry	Conduit terminal, DIN Connector, M12	
Coil insulation class	Class B	
Allowable voltage fluctuation ^{Note 2)}	12, 24 VDC	±10% of rated voltage
	100, 110, 200, 220 VAC	
Apparent power [VA]	115, 230 VAC	-15% to 5% of rated voltage
	100V	0.78 (with indicator light 0.87)
	110V	0.86 (with indicator light 0.97)
	115V	0.94 (with indicator light 1.07)
	200V	1.15 (with indicator light 1.30)
	220V	1.27 (with indicator light 1.46)
Power consumption [W]	230V	1.39 (with indicator light 1.60)
		0.35 (with indicator light 0.58)
Surge voltage suppressor	ZNR (Varistor)	
Indicator light	LED (Neon bulb when AC with DIN terminal and M12 connector)	
Enclosure (based on IEC60529)	IP65	

Table 2.

Note 1) Common solenoid between 110 & 115VAC, and between 220 & 230VAC.

Note 2) Valve state is not defined if electrical input is outside of specified operating ranges.

Pilot valve	DIN terminal	VO307(Y)-#D#1-X409-Q
	DIN terminal without connector	VO307(Y)-#DO#1-Q
	M12 connector	VO307(Y)-#D#1-#X408-Q
Coil rated voltage	DC [VDC]	12, 24
	AC (50/60Hz) [VAC]	100, 110, 200, 220
Electrical entry	DIN Connector, M12	
Coil insulation class	Class B	
Allowable voltage fluctuation	-15 to 10% of rated voltage	
Apparent power [VA]	Inrush	1.27 (50Hz), 10.7 (60Hz)
	Holding	7.6 (50Hz), 5.4 (60Hz)
Power consumption [W]	1.8 (with indicator light 2)	

2 specifications - continued

Surge voltage suppressor	DC [VDC]	Diode
	AC (50/60Hz) [VAC]	Varistor
Indicator light	LED	
Enclosure (based on IEC60529)	IP50	

Table 3.

2.3 Pneumatic symbol

Refer to catalogue for pneumatic symbols.

2.4 Indicator light

Table 4.

2.5 Special products

Warning

Special products (-X) might have specifications different from those shown in this section. Contact SMC for specific drawings.

3 Installation

3.1 Installation

Warning

- Do not install the product unless the safety instructions have been read and understood.

3.2 Environment

Warning

- Do not use in an environment where corrosive gases, chemicals, salt water or steam are present.
- Do not use in an explosive atmosphere.
- Do not expose to direct sunlight. Use a suitable protective cover.
- Do not install in a location subject to vibration or impact in excess of the product's specifications.
- Do not mount in a location exposed to radiant heat that would result in temperatures in excess of the product's specifications.
- Products compliant with IP65 enclosures are protected against dust and water, however, these products cannot be used in water.
- Products compliant with IP65 enclosures satisfy the specifications by mounting each product properly. Be sure to read the Specific Product Precautions for each product.
- Do not use in high humidity environment where condensation can occur.
- Altitude limitation is 1000 above sea level.

3.3 Piping

Caution

- Before connecting piping make sure to clean up chips, cutting oil, dust etc.
- When installing piping or fittings, ensure sealant material does not enter inside the port. When using seal tape, leave 1.5 to 2 thread exposed on the end of the pipe/fitting.
- Tighten fittings to the specified tightening torque.

Connection threads (Rc, G, NPT, NPTF)	Tightening torque [N·m]
1/8	7 to 9
3/8	22 to 24
1/2	28 to 30
3/4	36 to 38
1	36 to 38

Table 5.

3 Installation - continued

3.4 Lubrication

Caution

- SMC products have been lubricated for life at manufacture, and do not require lubrication in service.
- If a lubricant is used in the system, refer to catalogue for details.

3.5 Fluid supply

Valve is designed for use with coolant only. Do not use with water. The wetted parts are cast iron and will rust if used with improper fluids.

Warning

- The use of a fluid that contains foreign matter can cause problems, such as malfunction and seal failure by promoting the wear of the valve seat and armature, by sticking to the sliding parts of the armature, etc.
- Install a suitable filter (strainer) immediately upstream of the valve.

3.6 Pilot air supply

Warning

- Use clean air. If the compressed air supply includes chemicals, synthetic materials (including organic solvents), salinity, corrosive gas etc., it can lead to damage or malfunction.

Caution

- Install an air filter upstream of the valve. Select an air filter with a filtration size of 5µm or smaller.

3.7 Manual override

Warning

- Manual override is used to switch the main valve without inputting an electrical signal for the valve. When manual operation is performed, the connected actuator will start operating, so be sure to confirm that it is safe to operate beforehand.
- Locked manual overrides might prevent the valve responding to being electrically de-energized or cause unexpected movement in the equipment.
- Refer to the catalogue for details of manual override operation.

3.8 Mounting

Warning

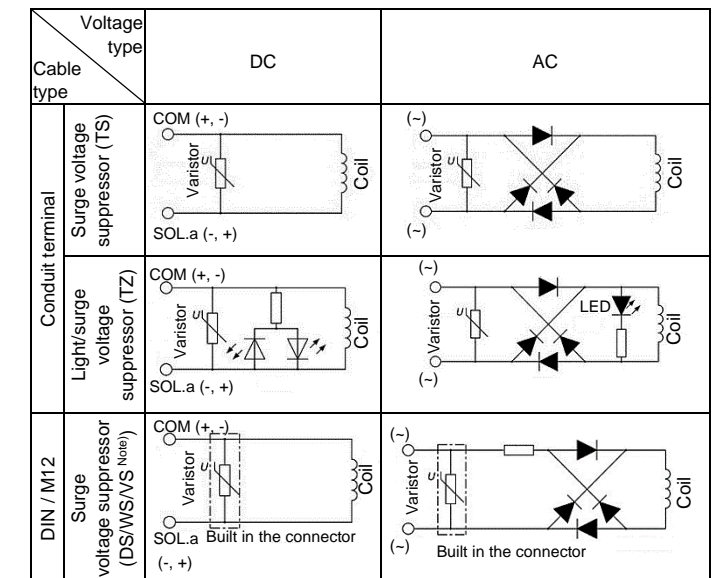

Do not install with the coil downwards. If a valve is mounted with the coil positioned downwards, foreign objects in the fluid will adhere to the core/armature leading to a malfunction.

3.9 Electrical circuits

Caution

Surge suppression should be specified by using the appropriate part number. If a valve type without suppression (Type 'Nil') is used, suppression must be provided by the host controller as close as possible to the valve.

3.9.1 V116 Pilot

3 Installation - continued

Table 6.

Note) VS and VZ are only available for DC type.

3.9.2 VO307 pilot valve

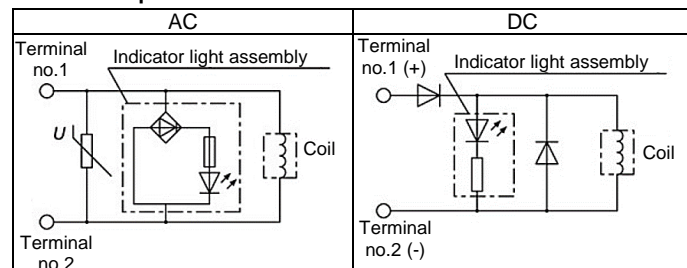

Table 7.

3.10 Electrical connectors

3.10.1 V116 pilot

Caution

- For conduit and DIN terminals, use cable with O.D. of $\varnothing 4.5$ mm to $\varnothing 7$ mm (reference: 0.5 mm² to 1.5 mm², 2 core or 3 core wires equivalent to JIS C 3306).
- Tighten the ground nut and screws within the specified torque range.
- Refer to catalogue for additional details.

3.10.1.1 How to use conduit terminal

Figure 1.

3.10.1.2 How to use DIN terminal

Figure 2.

3 Installation - continued

Figure 3.

Warning

The ground terminal is connected to the coil assembly only and does not provide a protective earth for the body of the valve.

3.10.1.3 Circuit diagram with light/surge voltage suppressor

Table 8.

3.10.1.4 M12 connector

Caution

- Do not use a tool to mount the connector, as this may cause damage. Only tighten by hand (recommended tightening torque: 0.4 to 0.6 N·m)
- The excessive stress on the cable connector will not be able to satisfy the IP65 rating. Please use caution and do not apply a stress of 30 N or greater.

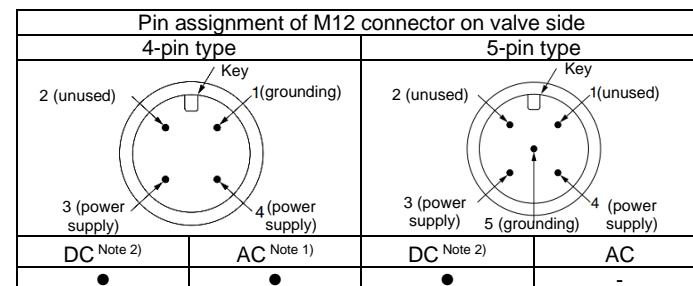

Table 9.

Note 1) For AC, a surge voltage suppressor or light/surge voltage suppressor can be selected.

Note 2) About DC specifications
 0.35 W type (Pilot valve V116) has no polarity.
 1.8 W type (Pilot valve VO307) has polarity, pin no. 3(-) and pin no. 4(+).

3.10.2 VO307 pilot valve

3.10.2.1 How to use DIN terminal

- Use cable with O.D. of $\varnothing 6$ mm to $\varnothing 8$ mm.
- Tighten screws within the specified torque range.
- Refer to catalogue for additional details.

3 Installation - continued

Figure 4.

3.11 Residual voltage

Caution

- If a Zener diode or varistor voltage suppressor is used, the suppressor arrests the back EMF voltage from the coil to a level in proportion to the rated voltage.
- Ensure the transient voltage is within the specification of the host controller.
- In the case of a diode, the residual voltage is approximately 1 V.
- Valve response time is dependent on surge suppression method selected.

3.12 Countermeasure for surge voltage

Caution

- At times of sudden interruption of the power supply, the energy stored in a large inductive device may cause non-polar type valves in a de-energised state to switch.
- When installing a breaker circuit to isolate the power, consider a valve with polarity (with polarity protection diode), or install a surge absorption diode across the output of the breaker.

3.13 Extended period of continuous energization

Warning

If a valve is continuously energized for long periods of time, heat generation of the coil may result in reduced performance and shorter service life. This may also have an adverse effect on the peripheral equipment in proximity. Should a valve be continuously energized for long periods of time, or its daily energized state exceeds its non-energized state, please use a valve with DC specifications. Additionally, when using with AC, energizing for long periods of time continuously, select the air operated valve and use the continuous duty type of the VT307 for a pilot valve.

4 How to Order

Refer to catalogue for 'How to Order'.

5 Outline Dimensions

Refer to catalogue for outline dimensions.

6 Maintenance

6.1 General maintenance

Caution

- Not following proper maintenance procedures could cause the product to malfunction and lead to equipment damage.
- If handled improperly, compressed air can be dangerous.
- Maintenance of pneumatic systems should be performed only by qualified personnel.
- Before performing maintenance, turn off the power supply and be sure to cut off the supply pressure. Confirm that the air is released to atmosphere.
- After installation and maintenance, apply operating pressure and power to the equipment and perform appropriate functional and leakage tests to make sure the equipment is installed correctly.
- If any electrical connections are disturbed during maintenance, ensure they are reconnected correctly and safety checks are carried out as required to ensure continued compliance with applicable national regulations.
- Do not make any modification to the product.
- Do not disassemble the product, unless required by installation or maintenance instructions.
- In the case of long term storage, thoroughly remove all moisture to prevent rust and deterioration of rubber materials, etc.

Warning

- Do not disassemble the product. The safety of products which have been disassembled cannot be guaranteed. In particular, the C type retaining ring inside the cover of the N.C. type valve and the bolt on the cover of the 3-port dual pressure specification must not be removed. Removal may result in the cover, piston, or spring popping out, which may result in an accident. Never remove the C type retaining ring or the bolt.
- Although the product has a scraper to prevent foreign matter from entering into the product, fluid containing fine foreign matter such as abrasive powder may cause sealing failure by the foreign matter adhering to the rod sliding part. Perform periodic maintenance or take countermeasures. Sealing failure of the rod sliding surface will allow reverse flow of the fluid in the pilot air piping, entering into the pilot valve or circuit connected to the pilot air piping, causing adverse effects such as operation failure or leakage.

6.2 Replacement parts

Caution

- Ensure gaskets are in good condition, not deformed and are dust and debris free.
- Refer to catalogue for replacement parts.

7 Limitations of Use

Warning

The failure modes of this component are not defined. The system designer should determine the effect of the possible failure modes of the product on the system.

7.1 Limited warranty and disclaimer/compliance requirements

Refer to Handling Precautions for SMC Products.

Warning

7.2 Effect of energy loss on valve switching

7.2.1 Air operated

Air supply cut	Valve returns to OFF position by spring force
----------------	---

Table 10.

7.2.2 External pilot solenoid

Pilot air supply present, electrical supply cut	Valve returns to OFF position by spring force
Electrical supply present, pilot air supply cut	Valve returns to OFF position by spring force

Table 11.

7.2.3 Protection against unexpected start-up

If the external pilot valve leaks, the main unit may be activated.

7 Limitations of Use - continued

7.3 Low temperature operation

- The valve can be used in an ambient temperature of between -10°C. However, take measures to prevent freezing or solidification of impurities, etc.
- When using valves for water application in cold climates, take appropriate countermeasures to prevent the water from freezing in tubing after cutting the water supply from the pump, by draining the water, etc. When warming by a heater, etc., be careful not to expose the coil portion to a heater. Installation of a dryer, heat retaining of the body is recommended to prevent freezing condition in which the dew point temperature is high and the ambient temperature is low, and the high flow runs.

Warning

7.4 Fluids

- The compatibility of the components of this product with the fluid used may vary depending on the type of fluid, additives, concentration, temperature, etc. Check the compatibility with the actual machine before use.
- Take measures to prevent static electricity since some fluids can cause static electricity.
- Do not use the product with the fluids listed below:
 - Fluids that are harmful to the human body.
 - Combustible or flammable fluids.
 - Corrosive gas and fluid.
 - Sea water, saline.

7.5 Holding of pressure

Since valves are subject to air leakage, they cannot be used for applications such as holding pressure (including vacuum) in a system.

7.6 Cannot be used as an emergency shut-off valve

This product is not designed for safety applications such as an emergency shut-off valve. If the valves are used in this type of system, other reliable safety assurance measures should be adopted.

7.7 Closed circuit

In a closed circuit, when liquid is static, pressure could rise due to changes in temperature. This pressure rise could cause malfunction and damage to components such as valves. To prevent this, install a relief

valve in the system.

7.8 Impact by rapid pressure fluctuation

When an impact caused by the rapid pressure fluctuation, such as water hammer etc., is applied, the solenoid valve may be damaged. Install water hammer relief equipment (accumulator, etc.), or use a SMC water hammer relief valve (e.g. VXR series).

Caution

7.9 Leakage voltage

Ensure that any leakage voltage caused by the leakage current when the switching element is OFF causes $\leq 3\%$ (for DC coils), $\leq 8\%$ (for AC coils with V116 pilot valve, 0.35 W type) or $\leq 15\%$ (for AC coils with VO307 pilot valve, 1.8 W type) of the rated voltage across the valve.

7.10 EMC restrictions

7.10.1 Class and group description

- This product is group 1, class A equipment according to EN55011.
- Group 1 equipment does not intentionally generate radio-frequency energy in the range 9kHz to 400 GHz.
- Class A equipment is equipment suitable for use in all locations other than those allocated in residential environments and those directly connected to a low voltage power supply network which supplies buildings used for domestic purposes.
- This equipment is not intended for use in residential environments and may not provide adequate protection to radio reception in such environments.

7.10.2 Cable length to connect

The cable to connect the product shall be less than or equal to 30m.

7.10.3 Connecting the power supply

This product is not intended to be directly connected to any DC Distribution network.

8 Product Disposal

This product shall not be disposed of as municipal waste. Check your local regulations and guidelines to dispose this product correctly, in order to reduce the impact on human health and the environment.

9 Return of Product

If the product to be returned is contaminated or is possibly contaminated with substances that are harmful to humans, for safety reasons, please contact SMC beforehand and then employ a specialist cleaning company to decontaminate the product. After the decontamination prescribed above has been carried out, submit a Product Return Request Sheet or the Detoxification/Decontamination Certificate to SMC and await SMC's approval and further instructions before attempting to return the item. Please refer to the International Chemical Safety Cards (ICSC) for a list of harmful substances.
